

Exhibit J – Supporting Documentation

October 10, 2007

Dear Member of the Legislature and Friends:

This letter is to ask for your help for the many constituents in our country who are being affected unjustly by electronic weapons torture and covert harassment groups. Serious privacy rights violations and physical injuries have been caused by the activities of these groups and their use of so-called non-lethal weapons on men, women, and even children.

I am asking you to play a role in helping these victims and also stopping the massive movement in the use of Verichip and RFID technologies in tracking Americans.

Long before Verichip was known we were testing these devices on Americans, many without their knowledge or consent. With the new revelations of the cancer risk besides the privacy and human rights problems with the use of Verichip and RF signals, I am asking for your help in stopping these abuses and aiding those already affected. Your attendance is therefore requested at a conference call regarding these issues on Monday, October 29, at 11 am EST. After a period of brief presentations, we will have a discussion of these issues with the intent of creating a way forward toward solutions. Here is the call-in information:

TIME/DAY: Monday, October 29, 11 am EST

CALL-IN NUMBER: 1-605-475-8590

ROOM NUMBER: 5888200

To R.S.V.P or for questions, please call: 1-817-269-0301

Sincerely,

A handwritten signature in cursive script that reads "Jim Guest".

Rep. Jim Guest

District Office: 660-535-6664

Capitol Office: 573-751-0246

Exhibit J – Supporting Documentation

Excerpts from:

Bluebird: Deliberate Creation of Multiple Personality by Psychiatrists by Colin Ross, MD

Introduction page F – “Mind control contractors with TOP SECRET clearance include the American Psychological Association, Past Presidents of the American Psychiatric Association and the Society for Biological Psychiatry, and psychiatrists who have received awards from the American Psychological Association and the American Psychiatric Association.”

In one of the MKULTRA Subproject 61 documents, Dr. Wolff defines the historical context for the CIA's interest in mind control in general, which is also the context and motive for military funding of brain electrode implant experiments:

The investigations of the highest integrative functions are fundamentally aimed at increasing our understanding of the functions of the human cerebral hemispheres in overall adaptive behavior. They arose out of our laboratory and clinical experiences during the past twenty years, and especially out of our interest in the phenomena exhibited by men exposed to extremely threatening life situations; and they were initiated during the period when we were investigating the untoward effects of Communist police procedures.

When Dr. Wolff refers to "communist police procedures," he means the brainwashing of American POWs during the Korean War (see Chapter 4), which probably included the creation of Manchurian Candidates. Another MKULTRA Subproject related to the goal of "increasing our understanding of the human cerebral hemispheres" was Subproject 129, which was entitled. "Computer Analysis of Bioelectric Response Patterns." This was a TOP SECRET cleared project conducted at George Washington University and LeIer University of Georgia.

MKULTRA Subproject 94 involved placing electrodes into the brains of animals in order to control their behavior. By using a remote transmitter, the doctors could control the animals' movements and use them for delivery of bombs and biological and chemical weapons. A CIA MEMORANDUM FOR THE RECORD dated 18October 1960 describes the research:

The purpose of this Subproject is to provide a continuation of investigations on the remote directional control of activities on selected species of animals. Miniaturized stimulating electrode implants in specific brain center areas will be utilized... The ultimate objective of this research is to provide an understanding of the mechanisms involved in the directional control of animals and to provide practical systems for [whited out] application.

Exhibit J – Supporting Documentation

The document describes Subproject 94 as a fine-tuning of extensive prior successful research.

A CIA memorandum for MKULTRA Subproject 142 is included in Appendix C. It describes the use of animals for delivery of biological and chemical weapons, and the control of animals through stimulation of brain electrodes. Various aspects of the overall research program were parceled out via different Subprojects under other cryptonyms besides MKULTRA, but the overall goal was clear; to control the mind and behavior and to create dissociation, through a combination of drugs, sensory isolation, hypnosis, brain electrode implants, electric shock and beaming different kinds of energy at the brain. The ability to create limited, controlled amnesia through a variety of methods was a primary goal of the mind control programs.

A MEMORANDUM FOR THE RECORD for MKULTRA subproject 142 dated 22 May 1962 states:

The reason for separating this work financially from the other efforts of [whited out] in the Agency's behalf is to allow him to engage in some very practical experiments at some point in the work which would present security problems if this effort were handled in the usual way. Some of the uses proposed for these particular animals would involve possible delivery systems for BW/CW agents or for direct executive action type operations as distinguished from the eavesdropping application of [whited out].

"Executive action type operations" means human assassination. Brain electrode experiments were also conducted in humans, but there is no declassified documentation of the use of the human subjects in field-testing or in actual operations.

Dr. Jose Delgado, a neurosurgeon and professor at Yale, received funding from the Office of Naval Research, the Air Force 657 1st Aeromedical Research Laboratory (Grant Number F29600-67-C-0058) and the Public Health Service for brain electrode research on children and adults.

Dr. Delgado's research grants from the Office of Naval Research included:

Year	Amount	Subject
1954	\$7,950.00	Neurological mechanisms in epilepsy
1955	\$9,610.00	Neurological behavior in epilepsy and in group behavior
1956	\$9,610.00	Neurological behavior in epilepsy and in group behavior
1960	\$10,000.00	Neurological mechanisms in epilepsy and

Dr. Delgado did similar research in monkeys and cats and in one paper describes the cats as "mechanical toys." He was able to control the movements of his animal and human

Exhibit J – Supporting Documentation

subjects by pushing buttons on a remote transmitter box. Another case involved an 11-year old boy who underwent a partial change of identity upon remote stimulation of his brain electrode:

Dr. Delgado wrote a book entitled *Physical Control of the Mind: Toward a Psychocivilized Society*. In it he described his vision of evolution. Delgado believed that control of the human brain through remote stimulation of implanted electrodes offered man another step up the evolutionary ladder. With this technology, man could directly control his own mind, mood and behavior.

He is also quoted as saying:

Man does not have the right to develop his own mind. We need a program of psychosurgery for political control of our society. The purpose is physical control of the mind. Everyone who deviates from the given norm can be surgically mutilated.

We must electrically control the brain. Some day armies and generals will be controlled by electric stimulation of the brain. - (Congressional Record, New York Times)

Brain electrode research was also conducted independently at Harvard by Dr. Delgado's co-authors, Drs. Vernon Mark, Frank Ervin and William Sweet (see Chapter 3 for Radiation Committee testimony of Dr. Sweet). Dr. Delgado supplied brain electrodes to the Harvard team through an Office of Naval Research contract. Frank Ervin, the psychiatrist on the team, was trained at Tulane by brain electrode specialist, Dr. Robert Heath. He was later recruited by Dr. Louis Jolyon West to join the UCLA Violence Center (see Chapter 10). One of the plans for the Center was to control criminals through brain electrode implants. The Harvard work was described in Mark and Ervin's book *Violence and the Brain*; in that book, the authors describe the potential use of brain electrodes for controlling urban violence. They suggest that this technology might have been useful in controlling black riots in Watts, California during the 1960's.

NON-LETHAL WEAPONS

The network of mind control doctors, as it existed in the 1950's and 1960's, included specialists in non-lethal weapons. *Non-lethal weapons* is a broad category which includes devices for beaming various kinds of energy at human targets in order to temporarily incapacitate them, or to control or affect their behavior. Non-lethal weapons research has been conducted at universities in the United States on contract to the CIA, and has overlapped with research on hallucinogens and brain electrode implants. Funding of the experiments began in MKULTRA.

Through MKULTRA Subproject 54, the CIA gave \$62,400.00 to the Office of Naval

Exhibit J – Supporting Documentation

Research in 1955. The researcher funded in this project was studying how to produce concussions from a distance using mechanical blast waves propagated through the air. Under a heading of "POTENTIAL APPLICATIONS OF THE RESEARCH FINDINGS," the contractor says that such concussion "is always followed by amnesia for the actual moment of the accident." He also states:

The blast duration would be in the order of a tenth of a second. Masking of a noise of this duration should not be difficult. It would be advantageous to establish the effectiveness of both of the above methods as a tool in brain-wash therapy.

MKULTRA Subproject 119 was a literature review which included a summary of existing information on "Techniques of activation of the human organism by remote electronic means."

This early experimental and scholarly research under MKULTRA was the foundation of non-lethal weapons programs that are currently active. According to a report in *Defense Electronics*, consideration was given to using non-lethal weapons technology on David Koresh during the Branch Davidian siege in the spring of 1993.

A Russian expert on non-lethal weapons, Dr. Igor Smirnov, was brought to the United States for a series of meetings in northern Virginia that began on March 17, 1993. The meetings were attended by representatives of the CIA, the Defense Intelligence Agency, the FBI, and the Advanced Research Projects Agency.

Civilian attendees included Dr. Richard Nakamura of the National Institute of Mental Health and Dr. Christopher Green, Director of Biomedical Research at General Motors Corp.

According to the article, the device was not used on David Koresh because of software incompatibility problems. Smirnov could not guarantee its safety. A firm called Psychotechnologies Corp, based in Richmond, Virginia entered into an agreement with the Russians to share and develop this technology for American use.

Pasternak described non-lethal weapons research in the 1990's in an article in *US News and World Report*. According to the article, acoustic weapons research is ongoing at Scientific Applications & Research Associates, Inc. in Huntington Beach, California, with testing at nearby Camp Pendleton Marine Corps Base; Mission Research Corps in Albuquerque, New Mexico; and the Armstrong Laboratory at Brooks Air Force Base, San Antonio, Texas. From 1980 to 1983, according to Pasternak, the Marine Corps Nonlethal Electromagnetic Weapons project was run by a man named Eldon Byrd, who did work at the Armed Forces Radiobiology Research Institute in Bethesda, Maryland. Bethesda is the location of the National Institute of Mental Health, a representative of which attended the meetings with Dr. Igor Smirnov in 1993.

There is abundant evidence in the public domain that non-lethal weapons research is ongoing and funded annually in the tens of millions of dollars, or more. Given the fact

Exhibit J – Supporting Documentation

that chemical and biological weapons, mind control drugs and radiation have been tested on unwitting civilian populations, it is possible that non-lethal weapons have also been tested on unwitting civilians.

As is true for mind control experimentation, physicians must be involved in non-lethal weapons programs. Non-lethal weapons programs therefore pose a problem in medical ethics and require official policies and guidelines from the American Medical Association and the American Psychiatric Association. To date, organized and academic medicine have acted as if non-lethal weapons do not exist.

Dr. Persinger's research on the ability of magnetic fields to facilitate the creation of false memories and altered states of consciousness is apparently funded by the Defense Intelligence Agency through the project cryptonym SLEEPING BEAUTY. Freedom of Information Act requests concerning SLEEPING BEAUTY with a number of different intelligence agencies including the CIA and DIA has yielded denial that such a program exists. Certainly, such work would be of direct interest to BLUEBIRD, ARTICHOKE, MKULTRA and other non-lethal weapons programs.

Schnabel lists Dr. Persinger as an Interview Source in his book on remote viewing operations conducted under Stargate, Grill Flame and other cryptonyms at Fort Meade and on contract to the Stanford Research Institute. Schnabel states (p. 220) that, "As one of the Pentagon's top scientists, Vorona was privy to some of the strangest, most secret research projects ever conceived. Grill Flame was just one. Another was code-named Sleeping Beauty; it was a Defense Department study of remote microwave mind-influencing techniques..."

It appears from Schnabel's well-documented investigations that Sleeping Beauty is a real, but still classified mind control program. Schnabel lists Dr. West as an Interview Source and says that West was a, "Member of medical oversight board for Science Applications International Corp. remote-viewing research in early 1990s."

Brain research related to the work by Dr. Persinger was conducted at UCLA by Dr. William Ross Adey, who was born in Australia on January 31, 1922. Dr. Adey had already published in Australia before moving to California in 1954. His research at UCLA has been funded by the Office of Naval Research (ONR Contract 233(91), the Air Force Office of Scientific Research...

Like Dr. Persinger, Dr. Adey also did experiments in which subjects' heads were placed in electromagnetic fields. This work was funded by U.S. Air Force Contract F44620-70-C-0017. Other papers of his were entitled "Prolonged Effects of LSD on EEG Records During Discriminative Performance in Cat: Evaluation by Computer Analysis and "Autonomic Responses During A Replicable Interrogation; the latter research was funded

Exhibit J – Supporting Documentation

by the Office of Naval Research.

Dr. Adey was a member of the MIT Neurosciences Research Program and edited a volume for them entitled *Brain Interaction with Weak Electric and Magnetic Fields*. Another 1977 volume in the same series was edited by Dr. Robert D. Hall of the Worcester Foundation for Experimental Biology (site of MKULTRA Subproject 8).

Dr. Adey worked as a consultant for NASA, the Department of Energy and the Veterans Administration. He was the project leader for the Medical Hazards of Microwaves Exposure, US/USSR Exchange Program beginning in 1976. In the same year he became a member of the National Academy of Sciences panel on biosphere effects of extremely low frequency radiation. Both of these subjects are of direct relevance to non-lethal weapons programs.

Other related brain work was to have been done at the UCLA Violence Project, which was to have been headed by Dr. Louis Jolyon West. Dr. West describes the demise of the Project prior to startup in a chapter entitled "Research on Violence: The Ethical Equation." The book was edited by CIA contractor, Dr. Neil Burch (see Chapter 14). Other contributors to the volume include Dr. Frank Ervin from the Harvard brain electrode team, and doctors from Walter Reed Army Institute of Research, the Navy Medical Neuropsychiatric Research Unit, San Diego and the Veterans Administration Hospital, Salt Lake City. Dr. West writes:

Actually Ervin was never involved with the CSRV [UCLA Center for the Study and Reduction of Violence] and had no part in its planning or development. Nevertheless, a radical students organization called Students for a Democratic Society (SDS) pounced on the "UCLA psychosurgery project" in wildly accusatory articles in the *Daily Bruin* and the underground press. Politically activist students suddenly began to picket with signs denouncing "A Clockwork Orange at UCLA," "Stop Psychosurgery at UCLA," "Fire Frank Ervin," "Drive West into the Sea" and the like.

At first the staff assumed that the sudden hostile attack on the yet unfunded center was essentially political. The theme seemed to be, "If Governor Reagan is for it, we are against it." However, a small group of much more sophisticated political radicals, including two or three psychiatrists, took over the fight against the establishment of the CSRV. They went to many community groups and organizations, ranging from the American Civil Liberties Union to the Black Panther Party, and persuaded them that the proposed center was in fact racist, sexist, and dangerous to human rights; in fact, nothing less than a government-sponsored program for mind control.

Funding for the UCLA Violence Project had been approved by Ronald Reagan but was withdrawn in response to public protest. The Project was to have been housed at a used Nike missile site outside Los Angeles. Dr. West states in a footnote to his chapter on the

Exhibit J – Supporting Documentation

Project, that Dr. Frank Ervin had recently been recruited to the Department of Psychiatry at UCLA.

Another California project cancelled due to public protest was a proposal to implant brain electrodes in prisoners at Vacaville State Prison, site of CIA mind control experiments on the drug pemoline under MKSEARCH. The prisoners were to be monitored by remote tracking technology post-discharge. If they entered a restricted area or exhibited sexual arousal patterns on remote EEG telemetry, a signal would be sent to their brain electrodes immobilizing them, and law enforcement personnel would be dispatched to apprehend them.

Dr. Louis Jolyon West was cleared at TOP SECRET for his work on MKULTRA. His numerous connections to the mind control network illustrate how the network was maintained; not through any central conspiracy, but by an interlocking network of academic relationships, grants, conferences, and military appointments. Some doctors in the network were not funded directly by the CIA or military, but their work was of direct relevance to mind control, non-lethal weapons development, creation of controlled dissociation and the building of Manchurian Candidates.

Chorover describes another mind control program at Vacaville State Prison which was aborted because of public protest. A Maximum Psychiatric Diagnostic Unit was set up at Vacaville in February, 1972 to deal with selected inmates out of the 700 held in solitary confinement in California prisons. A program was approved for this Unit in which prisoners would have electrodes implanted in their brains to monitor them and control their behavior after discharge, using radio transmitters. Due to public protest, the California Department of Corrections called a press conference on December 30, 1971 to announce that the project had been "temporarily abandoned for administrative reasons," repeating the pattern of the Tuskegee Syphilis Study and the Lafayette Clinic aggression project, both of which were run by physicians and shut down due to negative public reaction.

US report foretells of brave new world

By Nathan Cochrane

July 23, 2002

Next Magazine

A draft government report says we will alter human evolution within 20 years by combining what we know of nanotechnology, biotechnology, IT and cognitive sciences. The 405-page report sponsored by the US National Science Foundation and Commerce Department, Converging Technologies for Improving Human Performance, calls for a broad-based research program to improve human performance leading to telepathy, machine-to-human communication, amplified personal sensory devices and enhanced intellectual capacity.

People may download their consciousnesses into computers or other bodies even on the other side of the solar system, or participate in a giant "hive mind", a network of intelligences connected through ultra-fast communications networks. "With knowledge no longer encapsulated in individuals, the distinction between individuals and the entirety of humanity would blur," the report says. "Think Vulcan mind-meld. We would perhaps become more of a hive mind - an enormous, single, intelligent entity."

[They are already creating structures like that. The only form I know about is a kind of virtual concentration camp. which on the giving end may seem like something of a hive mind.]

Armies may one day be fielded by machines that think for themselves while devices will respond to soldiers' commands before their thoughts are fully formed, it says. **The report says the abilities are within our grasp but will require an intense public-relations effort to "prepare key organizations and societal activities for the changes made possible by converging technologies", and to counter concern over "ethical, legal and moral" issues.** Education should be overhauled down to the primary-school level to bridge curriculum gaps between disparate subject areas.

[The kindly, beneficent, mind reading aliens from 'AI: Artificial Intelligence' are a part of that suggestive public relations effort. What you're not shown is how the actual reality (on the receiving end at least for an unlucky relative few) is a kind of surveillance and harassment hell on Earth.]

...

"Concentrated multidisciplinary research thrusts could achieve crucially important results. Among the most promising of such proposed endeavors are the Human Cognome Project to understand the nature of the human mind, the development of a "Communicator"(synthetic telepathy) system to optimize human teams and organizations, and the drive to enhance human physiology and physical performance. Such efforts probably require the establishment of networks of research centers dedicated to each goal, funded by coalitions of government agencies and operated by consortia of universities and corporations."

Exhibit J – Supporting Documentation

Maj. Hans Petersen Danish Air Force [ret] Director of IGAP

"When about 25 million Americans make claims of having been abducted, it stands out. Interestingly, reported instances of abductions outside the American Continent - Canada, the US, Central and South America - until lately, did not primarily exist. Yet, about the time after the last poll, where 10 million Americans indicated their belief in being abducted, then suddenly claimed abductions began sprouting up elsewhere. So today, it can be said the 98% of all claimed abductions took place on the American continent, while the last 2% were found elsewhere - typically England and Germany. Whether there exists some significance or not, coincidentally, these two countries maintain numerous U.S. Military installations."

[That's apparently how you punish millions for their sins without ever once forcing the disclosure of either the suspension of presumed Constitutional protections or of the psychological operations arsenal itself. Brilliant. 'Abductees' assist in preserving the mystique by rarely if ever revealing why they are punished, when and if they even understand it. Too embarrassing. Although it is sometimes self-evident from the descriptions of the abductions themselves. Alien anal probe? Hmm....]

...

"In the early years, Russian scientists developed inventions that the Western World could only imagine in science fiction novels and movies. This included experimentation with low frequency radiation broadcast towards the American Embassy in Moscow, which resulted in serious illness and even death among staff members. The Americans were stunned, but with an incredible concentrated effort and enormous amounts of funds, they quickly succeeded in matching and surpassing the Russians accomplishments in this field."

"Famed Russian physiologist and Doyan of parapsychology, in his article 'Critical Evaluation of the Hypnogenic Method' detailed experiments by Dr I.F. Tomashevsky describing remote radio control of the brain from a distance of one or more rooms. Under conditions where the participant would not know or suspect they were being experimented with. One such early experiment was conducted from a distance in a park where via posthypnotic mental suggestion, the subject complied with the instruction to go to sleep within one minute."

...

"By this time the American Intelligence communities had become involved. In 1992, a former Pentagon liaison indicated that, 'If you could get a hold of a directory of the American Psychiatric Association in around 1956 -57, you'll be sure to find an enormous percentage of individuals listed are foreign born. Mostly they came out of Germany and Eastern Europe in a big wave. They were called 'Technical Specialists', but really were working on these unconventional mind control programs for the U.S. intelligence.' Describing experiments Frankensteinian in nature, 'In one laboratory, subjects were strapped involuntarily into a chair, their heads bristling with electrodes and transducers.

Exhibit J – Supporting Documentation

Any resistance was met with a paralyzing dosage of curare. The subjects brain waves were beamed into a nearby reception room crammed with voice analyzers, a wire recorder and radio receivers. The systematic annihilation or 'De-patterning' of the subject's mind and memory was accomplished. This sometimes was accomplished with drug over dosage, ECT shocks at 75 times the norm, etc. Psychic driving, the repetition of a recorded message played for 16 hours a day, reprogrammed the empty mind."

"By 1965, Intelligence scientists continued to probe ways to control the human behavior, and they were doing so with space-age technology that made the early days of MK Ultra look like the horse and buggy era. These scientists were advanced in stereotaxis surgery, simplifying the implantation of electrodes in the brain to wipe out a subject's memory in preparation for hypnotic re-constructive surgery."

"The same year, the New York Times learned of these obscure electronic experiments quietly funded by the government, and went tabloid with the front page headline Mind control coming, Scientists Warns." "According to a 1975 issue of Modern People, a Intelligence manual was prepared on the electronic wizardry of Radio-Hypnotic Intra-cerebral Control [RHIC]. When a part of the brain receives a tiny electric impulse for outside sources, such as vision, hearing, etc, an emotion is produced - for example the sight of a gang of boys beating up on an old woman. The SAME emotion of anger can be CREATED by ARTIFICIAL radio signals sent to your brain by a controller. You would instantly feel the same white-hot anger without any apparent reason."

Reference document DE-04-01

For the Controlled Personnel Effects capability, the S&T (Science and Technology) panel explored the potential for targeting individuals with nonlethal force, from a militarily useful range, to make selected adversaries think or act according to our needs. Through the application of nonlethal force, it is possible to physically influence or incapacitate personnel. Advanced technologies could enable the war fighter to remotely create physical sensations such as pressure or temperature changes. A current example of this technology is Active Denial, a nonlethal counterpersonnel millimeter wave system that creates a skin heating sensation to repel an individual or group of people without harm.¹ By studying and modeling the human brain and nervous system, the ability to mentally influence or confuse personnel is also possible. Through sensory deception, it may be possible to create synthetic images, or holograms, to confuse an individual's visual sense or, in a similar manner, confuse his senses of sound, taste, touch, or smell. Through cognitive engineering, scientists can develop a better understanding of how an individual's cognitive processes (pattern recognition, visual conditioning, and difference detection) affect his decision making processes. Once understood, scientists could use these cognitive models to predict a person's behavior under a variety of conditions with the potential to affect an adversary's mission accomplishment via a wide range of personnel effects.

As technology has advanced over recent years, most, if not all, systems are controlled by, or include, some form of computer or electronic components. Within the Dominant Remote Control capability, the S&T panel investigated the remote manipulation of adversarial electronic systems to control vehicles, sensors, communications, and information systems. In one scenario, the vision is to take control of enemy offensive and defensive military systems (a spacecraft, aircraft, or ground vehicle) and use them to our advantage. It might be possible to either confuse enemy systems so they would be unable to successfully perform their mission or to take control of enemy systems and remotely manipulate them. In another application, the control and manipulation of an adversary's communications and information streams would cause confusion or provide false information. The ability to disrupt or degrade an adversary's computers and information systems could render them inoperable or insert false information which, in turn, would significantly impair the enemy's ability to communicate. If our military commanders could achieve this dominant remote control capability, all aspects of the enemy's operations in the battlefield could be controlled to our advantage.

NIH Physician's Statement About Mind Control April 11, 2002

The originals of these letters were made available from, and are posted on:

Mind Justice Home Page

CORROBORATING STATEMENT by Dr. Eldon Byrd

In the mid to late eighties, while I was a practicing physician, I was working almost exclusively in the field of psycho-neuro-immuno-endocrinology, especially as concerned the new malady, called Chronic Fatigue Immune Dysfunction Syndrome. I had become good friends, Health and Wellness Advisor, and personal physician to US Senator Claiborne Pell of Rhode Island. I had also become very close friends with his Special Legislative Assistant.

It was in the 1987-88 timeframe that I was introduced to an individual of authority in the US Government who talked about a strange new phenomenon. This individual wanted me to meet a special investigative reporter who had been devoting all his time to investigating this new phenomenon. He thought that with my background in the neural sciences and some of the esoteric things I had been aware of in the realm of the physics of consciousness that I might be of assistance both to victims of this phenomenon and to the investigators of it.

He told me that there was significant evidence that the phenomenon was real and viewed by those involved in trying to understand it as very dangerous. He warned me from the outset that many of the scientists who had been close to understanding the technology behind the phenomenon wound up dying from apparent heart attacks. He said that in the opinion of many who had seriously investigated this phenomenon, that it appeared to be as dangerous a threat to humanity as anything ever in history, because it was not yet traceable to a specific source, and that it was so malevolent, that it had the potential to lead humanity to its own destruction.

I was also told that it was not uncommon for those investigating the phenomenon to become victims of it themselves, and that he considered that I should know the risks before volunteering to help. Because of my relationship to the Senator and my commitment to assist in matters affecting the health and welfare of the nation, I felt it was my duty to participate to the best of my ability.

I agreed to meet with the investigative reporter. He came to my office and gave me the first briefing on the phenomenon. I wish to preface my account with the fact that through the succeeding three or four years, I became convinced of the reality of the phenomenon, and in fact did come under attack, although in a manner not typical. What he described was as follows.

Exhibit J – Supporting Documentation

The majority of those who were victims of this "technology" would report that they had somehow received an implant of a speaker inside their head. Almost incessantly they would hear noise, as in background noise in a busy room with activity of people and machinery. They would also hear voices addressing them specifically. Often they would be harangued incessantly with exhortations to commit vile acts, such as inappropriate sexual behaviors from homosexual assaults to heterosexual rape and pedophilic acts. They would also experience the emotional accompaniment of these exhortations as urges that were hard to control. Often the urges and thoughts and voices caused the victim to experience tremendous fear and rage. Some of the victims experienced the "loss of time," in which they would be conscious, but somehow missed what happened to them for extended periods, ranging from minutes to hours at a time. They could not account for themselves during these periods.

Some of the victims made the association that these "attacks" coincided with watching television or from working at their computers. A number of victims learned that if they lost themselves in a crowd, they could frequently interrupt the "transmissions." This would lead them often to wander into crowded places in order to get some peace.

Inevitably these people would seek medical attention. The majority of these people had no prior history of psychiatric illness. Their experience of the voices had a sudden onset, and they could pinpoint the time or date the first awareness of these events occurred. Although many would be told that they had a psychiatric illness causing them auditory hallucinations, a number of eminent psychiatrists who studied some of these victims felt that the ones truly victimized by this "technology" did not fall into any psychiatric diagnosis, and that they were not experiencing auditory hallucinations. Quite a number of victims were successful well-adjusted people prior to the onset of the symptoms. Characteristically, all of the content of the voices, which was so perverse, had no reference to past character development in these people.

This reporter, who we will call M, told me that quite by chance, when one physician had prescribed a phenothiazine called Haldol without telling the patient what it was, the voices stopped almost immediately. However, when the patient found out the name of the medicine, the voices resumed. They tried this on a number of other patients, and found the same thing happened. It was as if there was something physiologically relevant to the action of the "transmission" that interfered with it, but if the monitoring agent behind the technology found out what the interfering drug was, it somehow could abort the efficacy.

[Undoubtedly a reasonable, though false theory – the deliberate cultivation of false theories.]

One has to say, as a skeptic, that an initial placebo effect was eliminated once the patient discovered that the medicine was used for psychiatric patients with hallucinations or psychosis. Yet, one has to wonder why, when Haldol is very effective in eliminating hallucinosis with or without the patient's knowledge, why there seemed to be this reproducible escape of efficacy, once the name of the medicine was introduced to consciousness of the victim.

Exhibit J – Supporting Documentation

Another attribute of the attackers according to M was their ability to learn of the victim's past medical history. One of the manifestations of the attack often was the reproduction of acute symptomatology that clinically resembled perfectly attacks of genuine disease conditions, such as acute abdominal pain associated with appendicitis, or chest pain associated with myocardial ischemia, of abdominal pain associated with pelvic inflammatory disease. When these people would seek medical attention for these symptoms, however, there would be absolutely no evidence clinically that anything truly pathologic was happening. Again, this would contribute to the judgment of the health provider that the victim was a "crock," meaning that it was all some form of psychosomatic neurosis.

M declared that his investigation of this phenomenon had taken him around the world. He had interviewed individuals in Soviet agencies, Israeli intelligence, our own CIA, NSA, and Naval Intelligence organizations. He found that many agencies in other countries had become aware of this and other similar phenomena, and although they acknowledged working on technology that could influence thought and feeling of human beings, made the distinction between their efforts and this phenomenon.

M stated that he was not able to get those assurances from the people he interviewed at NSA. I remember a specific instance in which M had gained possession of a copy of a transmission recorded from a victim's television set that was submitted to NSA for analysis. Prior to its submission, other scientists had verified that a very unusual signal had been received by some very special device they employed to monitor this victim's TV set. I was not told the nature of the signal nor was I told anything about the recording device. What he told me however, was that upon submitting it to the NSA, they were never able to get the recording back, nor were they able to ascertain from the NSA official what their findings revealed about the transmission. M was making the association that the victimization process itself could be propagated from person to person. He stated that he felt that even through telephone lines, one victim talking to another person could result in the person to whom the victim was talking become a victim themselves. He also reported that regarding his investigation, it seemed that as he got closer to answers, that the people he would speak to would irrationally shut him off, even after being initially engaged, interested and even participating in the investigation. He believed that the controlling entity or entities could sense when to interfere and actually cause people to block their own perceptions and awareness. M actually came to believe that the scope of interference could actually lead people to do things that were destructive to themselves, like cause their own automobile accidents.

He believed that Senator Pell had himself become an unaware victim of the manipulation of this force. He made this conclusion because of times at which Pell would be seriously engaged with M, it was as if a switch had been pulled and suddenly Pell would disengage, seeming to forget what the conversation was about or that he had any interest in what M was presenting at all. Yet later Pell would again invite M back for further discussion, only to have the discussion interrupted again in the same way. M was convinced it was not simply a distraction caused by being too busy or preoccupied with

Exhibit J – Supporting Documentation

other things. M also took note of the fact that some of the others he had met along the way with insight into this phenomenon had simply suddenly forgotten its importance. And when reminded by M, they would deny even ever knowing about it. M felt this was a defensive maneuver by the agent or agents behind the "technology."

My wife and I began to notice peculiar things in our own life immediately after M would place a phone call to me. For reasons unknown to us we would start to argue with each other and have very bad feelings toward one another. It became such a pattern that my wife pointed it out to me. I had never told her anything about M or the content of our discussions.

There was an episode that occurred in 1991 on December 17. Things seemed to be very intense with M. One night after a particularly intense discussion with M on the phone, my wife began to experience symptoms of lower abdominal pain. She became extremely weak and felt horribly sick. She recalled that the symptoms were exactly what she had experienced after sustaining an iatrogenically caused episode of pelvic inflammatory disease, after a tubal insufflation blew a smoldering streptococcal infection in her endometrium into her peritoneal cavity. She had undergone an evaluation for infertility after coming off the BC pill and not getting pregnant after a year of trying. This acute P.I.D. almost killed her and we were told that the residual scarring could mean she would never get pregnant. Notwithstanding the scarring we were fortunate to have three sons after a physician tried her on the fertility pill, Clomid. However, the fact that she had scarring in her peritoneal cavity from that infection was thoroughly documented.

That night the symptoms got worse and worse. I took her to the hospital for evaluation by her OB GYN. He agreed that she had signs of peritoneal inflammation on physical exam, but her blood work was normal. He said we should go home and see what happened. If it didn't improve we were to return in the morning and he would do a laparoscopic examination under anesthesia. As I was leaving the hospital after dropping off her miniscule urine sample, while my wife waited in the car, I had a very unusual experience. It was of a personal nature, but suffice to say that after it, my wife felt better after almost losing consciousness.

We decided that because it was already arranged for her to have the laparoscopy the next morning that we should go ahead with it. We did. We were amazed to hear the results. He doctor said she had the pelvis of a 14-year-old girl. There was no scarring, no evidence of current or prior pelvic inflammatory disease. To this day we do not know what happened to what had been thoroughly documented before. All we know is she never again has had the kind of sharp pains she would get at intervals from the "tearing of adhesions," which always was the explanation for those pains.

Shortly thereafter, I lost touch with M. About a year later I tried to reach him to see how he was doing. I was shocked to find that he was no longer working on this project, but was on to something else. When I said why would you abandon the work you were so fanatically committed to for the sake of humanity, his response was as if he had no idea to what I was referring.

Exhibit J – Supporting Documentation

Since then, neither my wife nor myself has had any further personal experience with anything resembling what took place during those years of frequent contact with M. I did see a number of patients who were afflicted with the voices and urges. I never was able to help any one of them.

It has been suggested that this horrible technology is something covertly being used by our government. Although I cannot rule it in or out, I sincerely believe that something real is going on that is not a part of normal physiology to affect these people. Not everyone who hears voices is a victim of this, just as not everyone who is a victim of this hears voices. My experience suggests to me that there is something definitely impacting certain people, perhaps at random, from the outside in.

In conclusion, further scientific investigation like the experiment of Dr. Byrd's for CAHRA to record the voices in victim's heads are needed in order to try to understand the mechanisms that are producing them. I also feel that being able to determine the type of signal itself would add valuable clues to the mechanism of transmission. For example, certain psychoactive properties have been attributed to ELF Electromagnetic signals and microwaves that are modulated with ELF signals. The presence of such signal means that there is a source that is directing them at victims.

It should become possible to test the victim's home and office environments for sources transmitting the signals such as telephones, televisions, and computers. Of course, the signals may be transmitted directly by other technological means, also. If present, the source would be guilty of illegal interference with the victims' civil rights and of experimenting on them without their permission.

Brain imaging techniques are available, such as MRI and PET scans. The MRI is useful for examining brain structure, whereas the PET scan is designed to examine the metabolic activity in the brain. Unless a victim has been subjected to signals that affect the physical structure of the brain, the MRI is of limited value; however the PET scan could determine the difference between internally generated symptoms and externally generated signals. Another useful technique is the multi-channel EEG beam scan that will indicate alterations in the electrical activity of the brain as a function of stimulus.

Exhibit J – Supporting Documentation

Letter from an unnamed police officer to Miss Eleanor White

Dear Eleanor,

I stumbled across your site only a matter of days ago and I'm afraid to say that the information has confirmed a number of facts that I had always suspected to be the case. Throughout recent years we have often been called in to cases where a victim suspects that he/she is being stalked by a large gang, and sometimes has some form of photographic evidence to back this up. However, **our superiors informed us that they had strict orders (from where they were unsure) that we were to ignore all cases of gang stalking and, if possible, to provide evidence that the victim is criminally insane.**

From my investigation in recent days it has become clear that:

- Victims are often people living on their own. This is because it is a lot easier to marginalize a victim who has no direct relatives to support them. It is also very useful for the perpetrators, since the singleton can be classed as mentally ill and there will be absolutely no evidence to prove that this is not that case.
- The criminal justice system is strictly under the control of a small elite who ensure that no charges are pressed against the instigators of the gang-stalking.

I will continue to look into the matter in the forthcoming weeks; I get the feeling that perhaps in the Christmas period we may see a surge in attacks. I will endeavor to keep you informed as long as I am not silenced.

Excerpts from:

Bioeffects of Selected Nonlethal Weapons (Declassified)

Addendum to the Nonlethal Technologies Worldwide Study (Ne GIC-II 47-101-98s)

DEPARTMENT OF THE ARMY

United States Army Intelligence and Security Command

Submitted to Mr. Don Friedman under FOIA request

Because the frequency of the sound heard is dependent on the pulse characteristic of the RF energy, it seems possible that this technology could be developed to the point where words could be transmitted to be heard like the spoken word, except that it could only be heard within a person's head. In one experiment, communication of the words from one to ten using "speech modulated" microwave energy was successfully demonstrated. Microphones next to the person experiencing the voice could not pick up the sound. Additional development of this would open up a wide range of possibilities.

Application of the microwave hearing technology could facilitate a private message transmission that may be useful to provide a disruptive condition to a person not aware of the technology. Not only might it be disruptive to the sense of hearing, it could be psychologically devastating if one suddenly heard "voices within one's head."

Mechanism to Reproduce the Desired Effects

Application of electromagnetic pulses is also a conceptual nonlethal technology that uses electromagnetic energy to induce neural synchrony and disruption of voluntary muscle control. The effectiveness of this concept has not been demonstrated. However, from past work in evaluating the potential for electromagnetic pulse generators to affect humans, it is estimated that sufficiently strong internal fields can be generated within the brain to trigger neurons. Estimates are that 50 to 100 kV/m free field of very sharp pulses (~1 nS) are required to produce a cell membranous potential of approximately 2 V; this would probably be sufficient to trigger neurons or make them more susceptible to firing.

The electromagnetic pulse concept is one in which a very fast (nanosecond timeframe) high voltage (approximately 100 kV/m or greater) electromagnetic pulse is repeated at the alpha brain wave frequency (about 15 Hz). It is known that a similar frequency of pulsing light can trigger sensitive individuals (those with some degree of light-sensitivity epilepsy) into a seizure and it is thought that by using a method that could actually trigger nerve synapses directly with an electrical field, essentially 100% of individuals would be susceptible to seizure induction. The photic-induced seizure phenomenon was borne out demonstrably on December 16, 1997 on Japanese television when hundreds of viewers of a popular cartoon show were treated, inadvertently, to photic seizure induction (figure

Exhibit J – Supporting Documentation

31). The photic-induced seizure is indirect in that the eye must receive and transmit the impulses which initially activate a portion of the brain associated with the optic nerve. From that point the excitability spreads to other portions of the brain. With the electromagnetic concept, excitation is directly on the brain, and all regions are excited concurrently. The onset of synchrony and disruption of muscular control is anticipated to be nearly instantaneous. Recovery times are expected to be consistent with, or more rapid than, that which is observed in epileptic seizures.

Tunability

There are many degrees of epileptic seizure in diseased persons, and it seems reasonable that electromagnetic stimulation of neural synchrony might be tunable with regard to type and degree of bodily influence, depending on the parameters associated with the chosen stimulus. Because there are no actual data to build on, these statements must be considered tentative. It is known that in the study of photic-induced seizures, parameters can be varied so that the individual under study does not actually undergo a grand mal seizure. This knowledge gives confidence that the proposed technology would be tunable.

Distribution of Human Sensitivities to Desired Effects

It is anticipated that 100% of the population would be susceptible. The mechanism is one that could act on many individual neuronal cells concurrently and hence does not depend on spreading regions of electrical activity as in the disease state.

Possible Influence on Subjects(s)

If the technology functions approximately as envisioned, the targeted individual could be incapacitated very quickly. Because there have been no reported studies using the conditions specified, experimental work is required to characterize onset time. Different types of technologies could be employed to influence wide areas or single individuals. Because this technology is considered to be tunable, the influence on subjects could vary from mild disruption of concentration to muscle spasms and loss of consciousness. The subject(s) would have varying degrees of voluntary control depending on the chosen degree of incapacitation.

Technological Status of Generator/Aiming Device

An electric field strength of roughly 100 Kv/m over a time period of 1 nanosecond is approximately the condition thought to be necessary to produce the desired effect when provided to an overall repetition rate of 15 Hz. Such a field may be developed using a radar-like, high-peak-power, pulsed source or an electromagnetic pulse generator operated at 15 Hz. These technologies exist today sufficient to evaluate the disabling concept. Power requirements are not high because the duty factor is so low. Aiming devices are currently available, but a high degree of directionality at long distances will require development. It may be necessary to provide bursts of these nanosecond pulses

Exhibit J – Supporting Documentation

in order to stimulate the desired effect. As the duty time increases so does the average power requirement for power source. Because there were no open literature reports from which to make inferences, there is some uncertainty about the power levels required.

Exhibit J – Supporting Documentation

Patrick Flanagan's Neurophone

Hope for the deaf and superlearning for all

by Eddy Taylor

In 1958, Dr. Patrick Flanagan invented the Neurophone in Bellaire, Texas **when he was 14 years old**. This electronic device transmits sound through the skin, by-passing normal hearing. A family friend who was a patent attorney for Shell Oil, helped Patrick submit a patent application. The patent examiners thought that this was just sound transfer through bone conduction and refused to issue a patent for 12 years. In a rare meeting in 1970, the patent office agreed to examine the Neurophone for themselves and meet Patrick and his attorney. They both encountered a surprise. The examiner had a deaf employee attend the meeting to test the device. The man was totally nerve deaf in one ear and almost totally deaf in the other. Patrick showed him how to use the Neurophone and played a record of the famous Maria Callas singing an opera. As he was able to hear the undistorted beauty of her voice, the tears of joy streamed down his face.

How the genie was lost

In an agonizing infringement, a Defense Intelligence Agency sealed the patent and a national security order forbade Patrick from working on, or even talking about this invention. After many years and nearly 300 inventions later, Patrick received the Neurophone for public use. In a triumphant court case, the secrecy and the seizure of the device, by the Government Agency, was overruled and the genie was out of the bottle!

Electronic hearing and telepathy

To quote Patrick's Neurophone article in Nexus Magazine-Feb/March 1994, "All hearing aids stimulate tiny bones in the ear. In order for bone conduction to work, the cochlea or inner ear that connects to the 8th cranial nerve must function. People who are nerve deaf cannot hear through bone conduction because the nerves in the inner ear are not functional. A number of nerve deaf people who have had the entire inner ear removed by surgery have been able to hear with the Neurophone.

The Neurophone is really an electronic telepathy machine. Several tests prove that it bypasses the 8th cranial nerve or hearing nerve and transmits sound directly to the brain. This means that the Neurophone stimulates perception through a 7th or Alternate Sense!"

Dolphin speak

In a curious parallel to Roxanne Kremer's work on interspecies communication with the Pink Amazon River Dolphins, Dr. Flanagan has made impressive technical contributions. In February, 1968, he applied for a patent on a device for translating human speech into dolphin language and vice-versa. This was a result of studies with dolphins in the lagoon of a small island off the coast of Oahu, Hawaii. A vocabulary of 30 words was discovered

Exhibit J – Supporting Documentation

before a startling intervention. *Six months after applying for the patent, it was placed under secrecy order #756, 124 by a U.S. Government surveillance agency.* Five years later, another hard-fought legal battle rescinded the suppression and patent #3,647,970 was granted on March 7th 1972. This speech processing patent is actually used as the circuit in the present version of the Neurophone.

Mind meld

Experiments with a Neurophone mind link between two or more people seemingly makes possible learning directly from the mind of another. And I thought this was only in the SCI FI domain of Star Trek's Mr. Spock and certainly beyond the ken of Dr. Spock. Nick Begich describes the phenomenon as an electronic 'corpus collosum' between the minds of 2 people. The corpus collosum is the semi-permeable bridge between the 2 hemispheres of an individual's brain.

Exhibit J – Supporting Documentation

From CanadianContent.net - Oct 22nd, 2004

Project Bluebird

The CIA has declassified over 18,000 pages of documents on extensive mind control programs carried out since the early 1950s.

Project **Bluebird** was approved by the director of the CIA on April 20, 1950. In a 1951 memo, Bluebird states that practical research was to be conducted to include these specific problems:

- *Can we create by post-H control an action contrary to an individual's basic moral principles?
- *Can we in a matter of an hour, two hours, one day, etc., induce an H (hypnotic) condition in an unwilling subject to such an extent that he will perform an act for our benefit?
- *Could we seize a subject and in the space of an hour or two by post-H control have him crash an airplane, wreck a train, etc.?
- *Can we by H and SI techniques force a subject to travel long distances, commit specified acts and return to us or bring documents or materials?
- *Can we guarantee total amnesia under any and all conditions?
- *Can we "alter" a person's personality?
- *Can we devise a system for making unwilling subjects into willing agents and then transfer that control to untrained agency agents in the field by use of codes or identifying signs?
- *How can sodium A or P or any other sleep inducing agent be best concealed in a normal or commonplace item, such as candy, cigarettes, coffee, tea, beer, medicines? Officially, Bluebird morphed into MKULTRA and was as established on 13 April 1953, at Richard Helms' suggestion as "ultra sensitive work."

The operational wing of MKULTRA, known as MKDELTA, had as its mission to find out how to use chemical and biological weapon ingredients to alter the human mind. Originally established as a supplementary funding mechanism to the ARTICHOKE project, MKULTRA quickly grew into a mammoth undertaking that outflanked earlier mind control initiatives.

The focal point of MKULTRA was the use of humans as unwitting subjects (without their knowledge or consent). The CIA sponsored numerous experiments of this kind. Regardless of a report by the CIA's Inspector General in 1963 recommending the termination of testing on unwitting subjects, future CIA Director Richard Helms continued to advocate covert testing on the grounds that "we are less capable of staying

Exhibit J – Supporting Documentation

up with the Soviet advances in this field.” On the subject of moral issues, Helms commented, “we have no answer to the moral issue.”

Army doctors were actively involved in LSD testing at least until the late 1970’s. Subjects of LSD experiments included children as young as five years old, and brain electrodes were implanted in children as young as 11 years of age. Four of the CIA’s MKULTRA Subprojects were on children.

Brain electrode research was also conducted independently at Harvard by Dr. Delgado’s coauthors, Drs. Vernon Mark, Frank Ervin, and William Sweet. Mark and Ervin describe implanting brain electrodes in a large number of patients at Harvard hospitals.

A patient named Jennie was 14 years old when they put electrodes in her brain. In their book *Violence and the Brain*, photographs show 18-year old Julia smiling, angry, or pounding the wall depending on which button is being pushed on the transmitter box sending signals to her brain electrodes. The mind control doctors saw their patients as biological machines, a view which made them sub-human, and therefore easier to abuse in mind control experiments.

When the deployment of Cruise missiles at American bases in the UK was at its height, women peace campaigners staged a series of highly publicized peaceful protests outside the perimeter wires. In late 1985, the women in the peace camps at Greenham Common began to experience unusual patterns of illness, ranging from severe headaches, drowsiness, menstrual bleeding at abnormal times or after the onset of menopause, to bouts of temporary paralysis and faulty speech coordination.

Electronics Today magazine carried out a number of measurements, and in December 1985 published their report which concluded: “Readings taken with a wide range of signal strength meters showed marked increases in the background signal level near one of the women’s camps at a time when they claimed to be experiencing ill effects.” They noted that if the women created noise or a disturbance near the fence, the signals rose sharply.

Microwave Auditory

MICROWAVE

AUDITORY EFFECTS AND APPLICATIONS

JAMES C. LIN, Ph.D.

*Associate Professor of Electrical Engineering
Adjunct Associate Professor of
Physical Medicine and Rehabilitation
Wayne State University*

*Former Assistant Professor of Rehabilitation Medicine
and Assistant Director, Bioelectromagnetics Research Laboratory
University of Washington School of Medicine*

This research monograph on the biological effects of microwave radiation concentrates on the pulse-modulated, microwave-induced, auditory phenomenon. Chapters are included on the auditory system, psychophysical observations, neurophysiological correlations, the interactive mechanism, and the spherical model. Earlier work done in this area is reviewed, and suggestions for further research into and potential applications of microwave radiation are given.

CHARLES C THOMAS ● PUBLISHER ● SPRINGFIELD ● ILLINOIS

What possible use could there be for research into microwave auditory effects than clandestine messaging? Part of Dr. Lin's research was funded by the U.S. Navy.

Excerpts from:

US Electromagnetic Weapons and Human Rights by Peter Phillips, Lew Brown and Bridget Thornton

A Study of the History of US Intelligence Community Human Rights Violations and Continuing Research in Electromagnetic Weapons

**Completed December 2006
Sonoma State University
Project Censored
Media Freedom Foundation**

Psychological Warfare, Information War, and mind control may seem to be exotic topics, but the impact of these technologies and techniques is profound. Our minds are being impacted through a longstanding series of programs aimed at manipulating public opinion through intelligence agencies, think tanks, corporate media and a host of non-governmental organizations designed to engender fear, division and uncertainty in the public. Media manipulation involving the artificial framing of our collective reality is often a hit or miss proposition, but psychological operations have been carried out in the past, and are being carried out even today, through the practices of “Information Warfare,” directed at enemies abroad and at the American people.

According to Mary C. FitzGerald of the Hudson Institute, New-concept weapons, such as laser, electromagnetic, plasma, climatic, genetic and biotechnological are the central principle driving the modernization of national defense. The potential for these weapons to be used for both good and bad deserves a great deal of attention, but there is little to be found in the media or discussed by our administration.

While developments in brain research are touted for their amazing therapeutic advances in the medical field, they primarily serve the purposes of the US military. Americans have little idea about the research concerning the capabilities of electromagnetism, directed acoustics, or computer-human interfacing.

Are new electromagnetic weapons in the possession of the government [to] be used on American citizens? The issue at hand is whether the research and technology currently being developed will benefit or harm us and how much liberty we are willing to sacrifice for a possibly skewed sense of national security and protection.

In September 2006, Air Force Secretary Michael Wynne announced that crowd control weapons should be tested on Americans first. "If we're not willing to use it here against our fellow citizens, then we should not be willing to use it in a wartime situation," said Wynne. "(Because) if I hit somebody with a non-lethal weapon and they claim that it injured them in a way that was not intended, I think that I would be vilified in the world press."

Exhibit J – Supporting Documentation

“During the 1990’s, in both presidential administrations, non-lethal weapons such as these and others received priority funding. The Secretary of Energy under Clinton, O’Leary, warned that over a 40 year period, 500,000 had been unwitting test subjects for military research on non-lethal weapons, including MKULTRA who claims among many victims, Ted Kaczynski, the Unabomber. There is no way to know who these people are or how to help them because there is paranoia in the military and no oversight in Congress. These black projects probably don’t even make it to the President.”

“The problem is that the military’s role is to be paranoid and think up scenarios where the worst can happen then prepare for this in order to protect the people from a hypothetical future event. But there is little to no oversight. The Senate Intelligence Committee is made up of people like Ted Stephens who thinks the internet is made up of pipes and tubes. These people do not have the required background knowledge to ask the right questions. According to the defense budget report, 40% of the budget is dedicated to black projects. There is no oversight and no public knowledge. In the European Union, things are much different.”

“In February 1998, I testified before the European Union parliament for an hour and a half and convinced them of the detrimental effects of non lethal weapons on humans, their behavior and their minds. The EU was convinced and passed a resolution banning the use of weapons that can manipulate a person (see Parliament Resolution A4-005/99 entitled "Resolution on the Environment, Security, and Foreign Policy" passed on January 29, 1999). During the hearings, the US representative and NATO representatives sat in the back and declined to participate when asked. In the US, there is no such resolution or anything remotely close to being considered by any member of Congress. There is no concern for it in the US because no one knows about them.”

However, hundreds of people continue to assert that a person or persons, whom they do not know, have been targeting them with electromagnetic weapons in a widespread campaign of either illegal experimentation or outright persecution. These experiences involved a number of discrete phenomena:

- Hearing voices when no one was present.
- Feeling sensations of burning, itching, tickling, or pressure with no apparent physical cause.
- Sleeplessness and anxiety as a result of “humming” or “buzzing”.
- Loss of bodily control, such as twitching or jerking of an arm or leg suddenly and without control.
- Unexpected emotional states, such as a sudden overwhelming feeling of dread, rage, lust or sorrow that passes as quickly as it arises.

The US Joint Non-Lethal Weapons Directorate released a paper in 2004 which presents “Crowd Control Modeling and Simulation.” This report discusses behavioral changes [of] human populations. That the Department of Defense calls for new weapons systems designed to work on the psychological underpinnings of a population should give human

Exhibit J – Supporting Documentation

rights activists great cause for alarm. The use of electromagnetic weapons to alter the emotional state, hamper the ability of an enemy or US citizens, to think clearly, and result in chaos and pain are morally problematic for a number of reasons:

1. Creating fear, anxiety confusion and irrational behavior within an individual or a population is counterproductive to the operations of a free society and to the execution of warfare. Chaos only breeds the need for greater and greater means of physical repression; irrational behavior is by definition unpredictable and as such provides significant difficulty when the task is to secure an area.
2. These weapons leave no tell tale clues. There are no bullet holes or gross damage (with the exception of those designed to maim, burn or explode targets).
3. They are operated from a great distance, meaning that the operator has no feedback as to the effects of his or her actions. This provides us with a very dangerous circumstance very similar to Millgram's experiment where we can predict with certainty gross abuses of power.
4. Any device that invades a persons mind, either through induction of “evoked potentials” through electromagnetic means or through the various “crazy-making” tactics employed in both information warfare and psychological operations is a violation of human rights and cognitive liberty.

In terms of authorizing and administering tests of radioactive substances and other tests on unsuspecting members of the public, history shows that people without ethical standards can rise to positions of great responsibility and once ensconced in such positions of trust, produce the most horrifying abuses without fear of reprisal. When layers of secrecy overlay the activities of otherwise rational and intelligent men, the failings of their hearts more readily show. In the case of actually attempting to control human behavior through both overt and covert means our departments of defense and intelligence agencies, both subordinate to the executive branch of government have historically proven incapable of protecting the public and undeserving of the trust given them to perform their functions for the public good.

The US has a long history of human rights violations through harassment, telephone tapping, video surveillance, behavior manipulation, torture, drug-induced states of conscience and psychological control. Congress’s passage of the Military Commission Act of 2006 put universal human rights outside the scope of US policy. Today, the US government is using the most technologically advanced forms of surveillance and control, along with the propaganda of fear and intimidation against its citizens. The US engages in covert torture, covert imprisonment, increased censorship and the massive secret classification of government documents.

John Norseen, a neuroscientist interested in Biofusion, the relationship between humans and computers, says, “If this research pans out you can begin to manipulate what someone is thinking even before they know it.” Norseen says he is agnostic on the moral

Exhibit J – Supporting Documentation

ramifications of this research. He feels that he is not a “mad” scientist - just a dedicated one. “The ethics don’t concern me,” he says, “but they should concern someone else.”

As reported in 2001, the statement of Dr. Eldon Byrd should be considered with great weight:

“A medical engineer, Eldon Byrd, reported a case that illustrates this point. After working on the Polaris submarine, which carried long-range nuclear weapons, Byrd developed non-lethal weapons with reversible effects. He regarded this as a humanitarian alternative to ‘punching holes in people and having their blood leak out in battle. His inventions used magnetic fields at biologically active wave frequencies to affect brain function. Byrd could put animals to sleep at a distance and influence their movements. When the success of his research became evident, suddenly he was pulled off the project and it went “black.” He believes the electromagnetic resonance weapons he developed have been used for psychological control of civilians rather than for exigencies in battle. That is, to ensure his participation, he was uninformed about the true nature of the project. Byrd’s case also illustrates how morally tolerable operations may transition to morally intolerable operations, or at least rise above the atrocity line”

Exhibit J – Supporting Documentation

Excerpts From:

Supreme Court Ruling on Limits on Surveillance Technology

By THE NEW YORK TIMES

WASHINGTON, June 11

FROM THE DECISION By Justice Scalia

This case presents the question whether the use of a thermal-imaging device aimed at a private home from a public street to detect relative amounts of heat within the home constitutes a "search" within the meaning of the Fourth Amendment.

The Fourth Amendment provides that "the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated." "At the very core" of the Fourth Amendment "stands the right of a man to retreat into his own home and there be free from unreasonable governmental intrusion." With few exceptions, the question whether a warrantless search of a home is reasonable and hence constitutional must be answered no.

FROM THE DISSENT By Justice Stevens

There is, in my judgment, a distinction of constitutional magnitude between "through-the-wall surveillance" that gives the observer or listener direct access to information in a private area, on the one hand, and the thought processes used to draw inferences from information in the public domain, on the other hand.

The court has crafted a rule that purports to deal with direct observations of the inside of the home, but the case before us merely involves indirect deductions from "off the wall" surveillance, that is, observations of the exterior of the home. Those observations were made with a fairly primitive thermal imager that gathered data exposed on the outside of petitioner's home but did not invade any constitutionally protected interest in privacy. Moreover, I believe that the supposedly "bright line" rule the court has created in response to its concerns about future technological developments is unnecessary, unwise, and inconsistent with the Fourth Amendment.

Justice Stevens apparently failed to consider that the tiny surveillable emanations from the brain and nervous system could be technically considered a radio broadcast in his interpretation of 'off the wall' and thus the ultimate intrusion into the mind would be legally permitted were his views to prevail. Even so, just that is still occurring.

Exhibit J – Supporting Documentation

House Resolution 1026

**Submitted to the Congress on Sept. 20, 2006 by US Representative
Cynthia McKinney**

For the re-opening of investigative hearings into the Counter-Intelligence Program (COINTELPRO) and other intelligence and law enforcement programs and agencies, and an expansion of those hearings to include renewal of previously curtailed abuses, and other activities sanctioned by the USA PATRIOT ACT.

Whereas the Congress condemns any abuse of human, civil, and constitutional rights undertaken by Federal, State, or local law enforcement agencies and agents;

Whereas the Congress acknowledges the violations of law perpetrated by the U.S. Federal Bureau of Investigation (FBI) conducted under the Counter Intelligence Program (COINTELPRO), and other intelligence agency and law enforcement programs such as CHAOS, GARDEN PLOT, CABLE SPLICER, LANTERN SPIKE, and others, which targeted the leadership of progressive social movements and implemented extra-constitutional aggregations of executive power or martial law;

Whereas the Congress recognizes the findings of the Church Committee which identified COINTELPRO and related activities as an illegal, extra-judicial effort designed to disrupt and destroy opposition groups and movements, and anti-war protest, among others;

Be it further resolved, That Congress intends to renew legislation that will end these abuses and fully protect the constitutional, civil, and human rights of all U.S. citizens and others who fall under the protection of our laws and international laws and treaties the United States is signatory to.

Human Brain Implant Research Suspended At Major University By Andrew Brownstein Staff Writer The Albany Times Union 8-25-99

Albany -- Professor whose work is at issue has focused on surgically inserted mind-control devices

The University at Albany has shut down the research of a psychology professor probing the "X-Files" world of government surveillance and mind control.

At conferences, in papers and research over two semesters, Professor Kathryn Kelley explored the claims of those who say they were surgically implanted with communications devices to read their thoughts.

According to colleagues, Kelley has privately claimed the university is violating her academic freedom. She declined to discuss the matter with a reporter.

Kelley's research and the controversy surrounding it echoes the experience of John Mack, a renowned Harvard psychiatrist who wrote the 1994 best seller "Abductions: Human Encounters with Aliens." By lending credence to the stories of those who claimed they were abducted and molested by space aliens, the book led to an unprecedented inquiry by the Harvard Medical School. A school committee eventually chastised Mack for engaging in unorthodox research and "affirming the delusions" of his patients.

But unlike Kelley, Mack has an international reputation. He earns hundreds of thousands of dollars in grants and won a Pulitzer Prize for his biography of T.E. Lawrence, known as Lawrence of Arabia. And while Harvard challenged Mack's conclusions, the investigation at UAlbany is focused on methods.

Last week, university spokeswoman Mary Fiess released this statement on the matter: "The university imposed the suspension because of serious concerns that the experiment did not meet the standards governing such projects on campus. While we're working to gather all the facts in this case, we cannot comment further."

A memo sent to all psychology professors and graduate students last week instructed them to refer calls "looking for information on any psychological research conducted in our department" to the university's public relations office.

According to three sources -- two faculty members and a graduate student -- the school's Institutional Review Board, which monitors human research, closed the project when a student complained late last spring. The student, sources said, was not allowed to leave a lecture that was part of Kelley's experiment. Refusal to allow a subject to leave an experiment violates National Science Foundation guidelines.

Despite the inquiry, Kelley, a fully tenured professor who earned \$67,000 last year, is slated to teach two graduate courses in the fall.

Exhibit J – Supporting Documentation

The department became aware of Kelley's theories as early as the spring of 1998, when a note on her office door announced a lecture called "The Psychology of Invading the Self."

The note described implant research funded by the National Security Agency and the Department of Defense with an annual budget of \$2 billion. The "uninformed, unconsenting subjects" of these devices were typically "federal prisoners and political dissidents," the note said.

At the same time, Kelley won approval from the review board to conduct research on "advances in technology that affect interpersonal communication." In a 16-page outline to the board, Kelley said she wanted to look at the uses of technology for "monitoring and control." She proposed presenting a lecture to research subjects and then having them respond to 60 questions about how the case study she would describe affected their views.

The interest in technology marked an extreme departure for Kelley, a professor at UAlbany since 1979. Kelley, who earned her Ph.D. from Purdue University, was a professor at Marquette University and the University of Wisconsin before joining the psychology faculty at UAlbany. Her previous research dealt with issues like health, date rape and risk-taking. With her ex-husband, distinguished psychology professor Donn Byrne, she co-authored a textbook on gender differences.

The shift in the focus of her research puzzled many. Gregory George, a graduate student who has since left the university, said he was part of a team assigned to lay the factual foundation for the implants research.

To his astonishment, he found several firms had developed "trans-tympanic transducers," instruments that function as mini-telephones, sending voice messages to the inner ear. Companies declined to market the product for fear of bad transmissions causing deafness, he said.

George believed the point of the research was to look at how people would perceive those with the implants, and whether there might be a social stigma attached.

"Kathryn has never been one to go traditional," said George. "But some of us wondered why we were looking at the social stigma of something that hadn't been developed yet. Why not look at the stigma of using something more common, like a wheelchair?"

Papers Kelley delivered at two recent conferences suggest that she was becoming fascinated with the subject of mind control.

At the annual conference of the Eastern Psychological Association in Providence, R.I. -- attended by several UAlbany graduate students -- she delivered a paper that looked at implant claims as "one of the indicators of schizophrenia."

Exhibit J – Supporting Documentation

Yet many colleagues began wondering to what extent Kelley believed that such implants were actually occurring.

"A lot of people wonder where she draws the line," said one graduate student, who asked not to be named. "Is it hypothetical? Or is it fact?"

In a more detailed treatment she gave at a conference earlier this month in Orlando, Fla., Kelley lent more credence to the phenomenon. She described how a subject might be implanted with the device during anesthesia, perhaps leaving tiny stitches visible in the ear. She called the devices RAATs, short for radio wave, auditory, assaultive, transmitting implants.

"When (short-wave) operators transmit to or scan RAAT implants in victims, they can talk to the victims remotely and anonymously, and hear the victim's speech and thoughts," Kelley wrote.

The paper noted that the National Institutes of Health denied any governmental role in such research.

The EPA is a respected psychological organization. But few professors had heard of the groups behind the Orlando meeting: the World Multiconference on Systemics, Cybernetics and Informatics, and the International Conference on Information Systems Analysis and Synthesis. The Web site for the organization, based in Venezuela, said it is devoted to cybernetics, which it describes as integrating various disciplines into "a whole that is permeating human thinking and practice."

The current investigation into Kelley's work is considered highly sensitive at the university, coming four years after a gunman who claimed the government planted microchips in his body held a class of 37 students hostage and shot one student during a struggle. Ralph Tortorici, the gunman, recently hanged himself in his state prison cell.

Without commenting on specifics, sociology Professor David Wagner, outgoing chair of the review board, said that shutting down a professor's research was "quite rare."

Some faculty members said the last time they remember the board making such a move was in the early 1970s.

NASA plans to read terrorist's minds at airports

By Frank J. Murray

THE WASHINGTON TIMES

August 17, 2002

Airport security screeners may soon try to read the minds of travelers to identify terrorists.

Officials of the National Aeronautics and Space Administration have told Northwest Airlines security specialists that the agency is developing brain-monitoring devices in cooperation with a commercial firm, which it did not identify.

Space technology would be adapted to receive and analyze brain-wave and heartbeat patterns, then feed that data into computerized programs "to detect passengers who potentially might pose a threat," according to briefing documents obtained by The Washington Times.

NASA wants to use "noninvasive neuro-electric sensors," imbedded in gates, to collect tiny electric signals that all brains and hearts transmit. Computers would apply statistical algorithms to correlate physiologic patterns with computerized data on travel routines, criminal background and credit information from "hundreds to thousands of data sources," NASA documents say.

The notion has raised privacy concerns. Mihir Kshirsagar of the Electronic Privacy Information Center says such technology would only add to airport-security chaos. "A lot of people's fear of flying would send those meters off the chart. Are they going to pull all those people aside?"

The organization obtained documents July 31, the product of a Freedom of Information Act lawsuit against the Transportation Security Administration, and offered the documents to this newspaper.

Mr. Kshirsagar's organization is concerned about enhancements already being added to the Computer-Aided Passenger Pre-Screening (CAPPS) system. Data from sensing machines are intended to be added to that mix.

NASA aerospace research manager Herb Schlickemaier told The Times the test proposal to Northwest Airlines is one of four airline-security projects the agency is developing. It's too soon to know whether any of it is working, he says.

"There are baby steps for us to walk through before we can make any pronouncements," says Mr. Schlickemaier, the Washington official overseeing scientists who briefed Northwest Airlines on the plan. He likened the proposal to a super lie detector that would also measure pulse rate, body temperature, eye-flicker rate and other biometric aspects sensed remotely.

Exhibit J – Supporting Documentation

Though adding mind reading to screening remains theoretical, Mr. Schlickennaier says, he confirms that NASA has a goal of measuring brain waves and heartbeat rates of airline passengers as they pass screening machines.

This has raised concerns that using noninvasive procedures is merely a first step. Private researchers say reliable EEG brain waves are usually measurable only by machines whose sensors touch the head, sometimes in a "thinking cap" device. "To say I can take that cap off and put sensors in a doorjamb, and as the passenger starts walking through [to allow me to say] that they are a threat or not, is at this point a future application," Mr. Schlickennaier said in an interview.

Both professors also raised privacy concerns.

"Screening systems must address privacy and 'Big Brother' issues to the extent possible," a NASA briefingpaper, presented at a two-day meeting at Northwest Airlines headquarters in St. Paul, Minn., acknowledges. Last year, the Supreme Court ruled unconstitutional police efforts to use noninvasive "sense-enhancing technology" that is not in general public use in order to collect data otherwise unobtainable without a warrant. However, the high court consistently exempts airports and border posts from most Fourth Amendment restrictions on searches.

"We're getting closer to reading minds than you might suppose," says Robert Park, a physics professor at the University of Maryland and spokesman for the American Physical Society. "It does make me uncomfortable. That's the limit of privacy invasion. You can't go further than that."

"We're close to the point where they can tell to an extent what you're thinking about by which part of the brain is activated, which is close to reading your mind. It would be terribly complicated to try to build a device that would read your mind as you walk by." The idea is plausible, he says, but frightening.

At the Northwest Airlines session conducted Dec. 10-11, nine scientists and managers from NASA Ames Research Center at Moffett Field, Calif., proposed a "pilot test" of the Aviation Security Reporting System.

NASA also requested that the airline turn over all of its computerized passenger data for July, August and September 2001 to incorporate in NASA's "passenger-screening testbed" that uses "threat-assessment software" to analyze such data, biometric facial recognition and "neuro-electric sensing."

Northwest officials would not comment.

Congressional Bill H.R. 2977 authored by Congressman Dennis Kucinich, October 2001

The bill sought to ban the placement in Earth orbit of:

“systems using radiation, electromagnetic, psychotronic, sonic, laser or other energies directed at individual persons or targeted populations for the purpose of information war, mood management or mind control of such persons or populations”

Exerpt from Rep. Kucinich’s Speech to Americans for Democratic Action Los Angeles February 17 2002

Let us pray that our nation will remember that the unfolding of the promise of democracy in our nation paralleled the striving for civil rights. That is why we must challenge the rationale of the Patriot Act. We must ask why should America put aside guarantees of constitutional justice?

How can we justify in effect canceling the First Amendment and the right of free speech the right of peaceable assemble?

How can we justify in effect canceling the Fourth Amendment probable cause the prohibitions against unreasonable search and seizure?

How can we justify in effect canceling the Fifth Amendment nullifying due process and allowing for indefinite incarceration without a trial?

How can we justify in effect canceling the Sixth Amendment - the right to prompt and public trial?

How can we justify in effect canceling the Eighth Amendment which protects against cruel and unusual punishment?

We cannot justify giving the CIA the ability to target people in this country for intelligence surveillance. We cannot justify a government which takes from the people our right to privacy and then assumes for its own operations a right to total secrecy.

Mind Control With Silent Sounds and Super Computers Resonance Newsletter of the MENSA Bioelectromagnetics Special Interest Group Editor Judy Wall

U. S. Patent #5,159,703 dated October 27, 1992
Inventor Dr. Oliver Lowery of Norcross, Georgia

Silent Sounds, Inc. states that it is interested only in positive emotions, but the military is not so limited. That this is a U. S. Department of Defense project is obvious. Edward Tilton, President of Silent Sounds, Inc., said, "The system was used throughout Operation Desert Storm (Iraq) quite successfully."

Far from necessarily being used as a weapon against a person, the system does have limitless positive applications. However, the fact that the sounds are subliminal makes them virtually undetectable and possibly dangerous to the general public.

These weapons were recently transferred from the Department of Defense over to the Department of Justice. Why? There are international treaties that exclude weapons of this nature in international warfare.

In other words, weapons that are barred from use against our country's worst enemies (notwithstanding the fact that the US did use this weapon against Iraqi troops!) can now be used against our own citizens by the local police departments against such groups as peaceful protestors of U. S. nuclear policies.

The secrecy involved in the development of the electromagnetic mind-altering technology reflects the tremendous power that is inherent in it. Whoever controls this technology can control the minds of all men.

As recently as last month [February 1998], this stonewall approach of total denial or silence on the subject still held fast, even toward committees of the U. S. Congress!

THE ETHICS DON'T CONCERN ME, BUT THEY SHOULD CONCERN SOMEONE ELSE."

U. S. News

By Douglas Pasternak

Dr. John Norseen, a Lockheed Martin neuroengineer, is conducting research into reading and interpreting "brain prints," sponsored by NASA, DARPA and the Army's NGIC. One possible application mentioned is scanning passengers' brain patterns in airports to search for a terrorist's (as usual) brain profile.

If this research pans out, says Norseen, "You can begin to manipulate what someone is thinking even before they know it." But Norseen says he is agnostic on the moral ramifications that he's not a mad scientist-just a dedicated one. Dr. Norseen said, "The ethics don't concern me, but they should concern someone else."

"We are at the point where this database has been developed enough that we can use a single electrode or something like an airport security system where there is a dome above your head to get enough information that we can know the number you're thinking," he adds.

Dr. John D. Norseen
Systems scientist for embedded systems
Lockheed Martin Aeronautics Company
Marietta, Georgia

“Mind War” by Michael Aquino and Colonel Paul E. Valley

"Psychotronic research is in its infancy, but the US Army already possesses an operational weapons system designed to do what Lt. Col. J.B. Alexander would like ESP to do - except that this weapons system uses existing communications media. It seeks to map the minds of neutral and enemy individuals and then change them in accordance with US national interests".

[General] Aquino's thesis stated that enemy populations could be subdued by inflicting a state of psychological terror and feelings of eminent destruction, shock and awe in other words. He discusses the use of psychotronic weapons or electronic weapons that influence the mind. Capitulation could be induced without firing a shot by using signals piggybacked on broadcasts of radio, TV and microwave communications to influence through subliminal suggestion, holograms, voice-to-skull and silent sound technologies to manipulate the feelings and thoughts of the target population. During the 1960s he was prominent in the Church of Satan.

He is now one of the highest ranking officers in the NSA.

Excerpts from:

**From “New World Vistas”
a book published in 1996 by the US Air Force Advisory Board**

We will have achieved a clear understanding of how the human brain works, how it really controls the various functions of the body, and how it can be manipulated (both negatively and positively). One can envision the development of electromagnetic energy sources, the output of which can be pulsed, shaped, and focused, that can couple with the human body in a fashion that will allow one to prevent voluntary muscle movements, control emotions (and thus actions), produce sleep, transmit suggestions, interfere with both short-term and long term memory, produce an experience set, and delete an experience set.

It would also appear possible to create high fidelity speech in the human body, raising the possibility of covert suggestion and psychological direction. When a high power microwave pulse in the gigahertz range strikes the human body, a very small temperature perturbation occurs. This is associated with a sudden expansion of the slightly heated tissue. This expansion is fast enough to produce an acoustic wave. If a pulsed stream is used, it should be possible to create an internal acoustic field in the 5-15 kilohertz range, which is audible. Thus, it may be possible to talk to selected adversaries in a fashion that would be most disturbing to them. (Kieth 223)

“Information Operations: A New War-Fighting Capability” Written for the Chief of Staff of the Air Force

The paper asserts that "for continued success as a superpower" the key is "information dominance".

Part of this dominance will be the development of a space satellite-linked Information Integration Center, or IIC, which will act as a central information processing and control center. The IIC will monitor people who have been implanted with a "microscopic brain chip...(the) chip performs two functions. First, it links the individual to the IIC, creating a seamless interface between the user and the information resources (in-time collection data and archival databases.) In essence, the chip relays the processed information from the IIC to the user. Second, the chip creates a computer generated mental visualization...

"Implanting "things" in people raises ethical and public relations issues". In the future, "The civilian population will likely accept an implanted microscopic microchip that allows military members to defend vital national interests". The paper goes on to note that "The California Institute of Technology has developed an energy efficient computer chip which emulates the analog thinking of the human brain...when this capability is fully mature, this chip could provide the baseline for a brain implant hooked to all the sensory segments of the brain, not just the eye". (Kieth pg 223)

Exhibit J – Supporting Documentation

Dr. Michael Persinger

Dr. Michael Persinger, a psychologist and neuro-scientist, "did research on the effects of electromagnetic radiation on the brain for a Pentagon weapons project". He has worked in the field for 40 years and has been funded by the Navy and reportedly the NSA as well. Persinger says brain processes can be circumvented by direct induction of this information within the brain...the basic premise is that synthetic duplication of the neuroelectrical correlates generated by sensors to an actual stimulus should produce identical experiences without the presence of that stimulus." He is saying that virtually any mental state can be artificially injected into a human brain...from an exterior source. The most frightening thing is that the means for doing this already exist in a fully operational form on a worldwide basis.

"The power levels for these amplitudes are similar to those associated with the signals (generated globally by radio and communication systems)... Within the last two decades a potential has emerged which was improbable but which is now marginally feasible. This potential is the technical capability to influence directly the major portion of the approximately six billion brains of the human species...by generating neural information within a physical medium within which all members of the species are immersed."

Persinger's message, minus the jargon, is that the entire human race can be mind controlled through the use of electromagnetic influence piggybacked on television and radio networks or other technical means. (Kieth 207)

"Apparatus and Method for Remotely Monitoring and Altering Brain Waves"

Patent #3951134

Robert G. Malech patented in 1976

The patents abstract states, "Apparatus for method of sensing brain waves at a position remote from the subject whereby electromagnetic signals of different frequencies are simultaneously transmitted to the brain of the subject"

"The present invention relates to apparatus and a method for monitoring brain waves wherein all components of the apparatus are remote from the test subject. High frequency transmitters are operated to radiate electromagnetic energy of different frequencies through antennas, which are capable of scanning the entire brain of the test subject or any desired region thereof. The signals of different frequencies penetrate the skull of the subject and impinge upon the brain where they mix to form an interference wave modulated by radiation from the brain's natural electrical activity. The Modulated interference wave is transmitted by the brain and received by an antenna at a remote station where it is demodulated, and processed to provide a profile of the subjects brain waves. In addition to passively monitoring his brain waves, the subjects neurological processes may be affected by transmitting to his brain, through transmitting compensating signals. The latter signals can be derived from the received and processed brain waves." (Kieth pg 182)

United States Patent - 4,877,027

Brunkan

October 31, 1989

Hearing system

Abstract

Sound is induced in the head of a person by radiating the head with microwaves in the range of 100 megahertz to 10,000 megahertz that are modulated with a particular waveform. The waveform consists of frequency modulated bursts. Each burst is made up of ten to twenty uniformly spaced pulses grouped tightly together. The burst width is between 500 nanoseconds and 100 microseconds. The pulse width is in the range of 10 nanoseconds to 1 microsecond. The bursts are frequency modulated by the audio input to create the sensation of hearing in the person whose head is irradiated.

Excerpts from:

**The Revolution in Military Affairs [RMA] and Conflict Short of War
July 25, 1994**

**U.S. ARMY WAR COLLEGE
Major General William A. Stofft
Commandant
STRATEGIC STUDIES INSTITUTE**

**Director - Colonel John W. Mountcastle
Director of Research - Dr. Earl H. Tilford, Jr.
Authors - Dr. Steven Metz and Lieutenant Colonel James Kievit**

American values also make the use of directed energy weapons against suspected narco-trafficking aircraft technologically feasible but morally difficult, perhaps unacceptable. The advantage of directed energy weapons over conventional ones is deniability. Against whom is such deniability aimed?

Deniability must be aimed at the American people, who do not sanction the imprisonment, much less execution, of individuals without a trial (and execution is how they will perceive it--the argument "we only disabled the aircraft, it was the crash which killed the pilot" will carry little weight).

American values and attitudes thus form significant constraints on full use of emerging technology, at least in anything short of a perceived war for national survival. Overcoming these constraints to make a RMA in conflict short of war would require fundamental changes in the United States--an ethical and political revolution may be necessary to make a military revolution.

[Metz and Kievit included the following scenario that projects plausible events occurring between approximately two and fifteen years from the year in which they wrote this paper in 1994. Only the authors can say what secretive and conjectured realities their scenario actually draws from, though all of it apparently falls within the realm of possibility.]

The revolutionaries first task was to recruit proselytes throughout the government and national security community. Initially the revolutionaries, who called their new strategic concept "Dynamic Defense," were opposed by isolationists who felt that new technology should be used simply to build an impenetrable electronic and physical barrier around the United States. Eventually the revolutionaries convinced the president-elect following the campaign of 2000 that Dynamic Defense was both feasible and effective--a task made easier by his background as a pioneering entrepreneur in the computer-generated and

Exhibit J – Supporting Documentation

controlled "perception-molding" systems developed by the advertising industry. The President was thus amenable to the use of the sort of psychotechnology which formed the core of the RMA in conflict short of war.

The first step in implementing Dynamic Defense was reshaping the national security organization and its underlying attitudes and values. Technology provided opportunity; only intellectual change could consolidate it. With the full and active support of the President, the revolutionaries reorganized the American national security system to make maximum use of emerging technology and new ideas.

One of the turning points of the revolution came when its leaders convinced the President and key members of Congress that traditional American ethics were a major hinderance to the RMA. This was crucial: the revolutionaries and their allies then crafted the appropriate attitudinal vessel for the RMA. Through persistent efforts and very sophisticated domestic "consciousness-raising," old-fashioned notions of personal privacy and national sovereignty changed. This was relatively easy since frustration with domestic crime had already begun to alter attitudes and values. In fact, the RMA in conflict short of war was, in many ways, a spin-off of the domestic "war on drugs and crime" of the late 1990s when the military, as predicted by William Mendel in 1994, became heavily involved in support to domestic law enforcement. The changes in American values that accompanied that struggle were easily translated to the national security arena. Once the norms concerning personal privacy changed, law soon followed.

With values changed, technology then opened the door to profound innovation. Vast improvements in surveillance systems and information processing made it possible to monitor a large number of enemies (and potential enemies). In the pre-RMA days, psychological operations and psychological warfare were primitive. As they advanced into the electronic and bioelectronic era, it was necessary to rethink our ethical prohibitions on manipulating the minds of enemies (and potential enemies) both international and domestic. Cutting-edge pharmaceutical technology also provided tools for national security strategists.

Sometimes the revolutionaries found it necessary to stoke the development of technology designed specifically for conflict short of war. Whenever possible, profitability was used to encourage private and quasi-private enterprises to develop appropriate technology. For example, much of the lucrative technology of surveillance, intelligence collection, and attitude manipulation used to solve the domestic crime problem was easily adapted to conflict short of war. The same held for new weapons, especially nonlethal biological ones and advanced psychotechnology. Only when there was absolutely no expectation of profit did the government directly sponsor research of cutting-edge technology, often with funds freed by disbanding what were seen as increasingly irrelevant conventional military forces.

The actual strategy built on the RMA was divided into three tracks. The first sought to perpetuate the revolution. Its internal dimension institutionalized the organizational and attitudinal changes that made the revolution possible, and pursued future breakthroughs

Exhibit J – Supporting Documentation

in close conjunction with business, the scientific community, and local law enforcement agencies--the core troika of 21st century security. The external dimension actively sought to delay or prevent counterresponses by controlling information and through well-orchestrated deception.

The operation officially began when the President transferred the Cuban portfolio from the Conflict Preemption Agency to the Conflict Containment Agency. An existing contingency plan with implementing software provided the framework for quick action. Immediately, all electronic communication in and out of Cuba was surreptitiously transferred to the national security filter at Fort Meade. This allowed full monitoring, control, and, when necessary, manipulation of private, commercial, and government signals. Potential or possible supporters of the insurgency around the world were identified using the Comprehensive Interagency Integrated Database. These were categorized as "potential" or "active," with sophisticated computerized personality simulations used to develop, tailor, and focus psychological campaigns for each. Individuals and organizations with active predilections to support the insurgency were targets of an elaborate global ruse using computer communications networks and appeals by a computer-generated insurgent leader. Real insurgent leaders who were identified were left in place so that sophisticated computer analysis of their contacts could be developed. Internecine conflict within the insurgent elite was engineered using psychotechnology. Psychological operations included traditional propaganda as well as more aggressive steps such as drug assisted subliminal conditioning. At the same time, Cubans within the United States and around the world were assigned maximum surveillance status to monitor their physical presence and communications webs.

Since all Americans in Cuba had been bioelectrically tagged and monitored during the initial stages of the conflict, the NEO went smoothly, including the mandatory health screening of all those returning to the United States. Coast Guard aircraft and hovercraft stanching illegal refugees. The attitude-shaping campaigns aimed at the American public, the global public, and the Cuban people went quite well, including those parts using computer-generated broadcasts by insurgent leaders--"morphing"-- in which they were shown as disoriented and psychotic. Subliminal messages surreptitiously integrated with Cuban television transmissions were also helpful. In fact, all of this was so successful that there were only a few instances of covert, stand-off military strikes when insurgent targets arose and government forces seemed on the verge of defeat. U.S. strike forces also attacked neutral targets to support the psychological campaign as computer-generated insurgent leaders claimed credit for the raids. At times, even the raids themselves were computer-invented "recreations." (These were a specialty of the Army's elite Sun Tzu Battalion.)

Many of the difficult-to-detect drugs and psychotechnology developed for use in conflict short of war have appeared on the domestic black market and, increasingly, in American schools and workplaces. Perhaps most important, Americans are beginning to question the economic, human, and ethical costs of our new strategy. A political movement called the "New Humanitarianism" is growing, especially among Americans of non-European descent, and seems likely to play a major role in the presidential election of 2012. There

Exhibit J – Supporting Documentation

are even rumblings of discontent within the national security community as the full meaning of the revolution becomes clear. Since the distinction between the military and non-military components of our national security community has eroded.

Advances in sensors and other elements of information technology may bring great benefits to conventional, combined-arms warfare, but will have less impact in conflict short of war, which is most often won or lost through the manipulation of images, beliefs, attitudes, and perceptions. These things rather than troop concentrations, command and control nodes, and transportation infrastructure are the key military targets in conflict short of war. This makes psychological technology much more important than strike technology. Ways must be found to use emerging technology, including advanced artificial intelligence and information dissemination systems, to help military strategists develop, implement, and continually improve methods of influencing opinion, mobilizing public support, and sometimes demobilizing it. There is also the potential for defensive psychotechnology such as "strategic personality simulations" to aid national security decision makers. To date, most analysts feel that the RMA has not generated adequate advances in such "soft war" capabilities or even the promise of such gains. But ultimate success in applying the RMA to conflict short of war hinges on the development of psychotechnology. As this emerges, it could be tested for political acceptability by using it first in non-lethal operations other than war like humanitarian relief and nation assistance.

Today, two RMAs may be underway simultaneously. The first (and more mature) is electronic. Its manifestations are improved C4I and precision strike systems. The second (and potentially more profound) RMA is biotechnological, including genetic engineering and advanced behavior-altering drugs. Because of the compression of time and the shortening of historical patterns, the biotechnical revolution is totally enmeshed with the electronic. It may ultimately be the combination of the two that proves truly revolutionary.

'Air Force Plan: Hack Your Nervous System' DefenseTech.org

The brain has always been a battlefield. New weapons might be able to hack directly into your nervous system.

Details of this emerged in a heavily-censored document released to Ed Hammond of the Sunshine Project under the Freedom of Information Act. Called “Sensory consequence of electromagnetic pulsed emitted by laser induced plasmas,” it described research on activating the nerve cells responsible for sensing unpleasant stimuli: heat, damage, pressure, cold. By selectively stimulating a particular nociceptor, a finely tuned PEP might produce sensations of say, being burned, frozen or dipped in acid -- all without doing the slightest actual harm.

The skin is the easiest target for such stimulation. But, in principle, any sensory nerves could be triggered. The Controlled Effects document suggests “it may be possible to create synthetic images...to confuse an individual's visual sense or, in a similar manner, confuse his senses of sound, taste, touch, or smell.

Microchip Implants, Mind Control and Cybernetics by Rauni-Leena Luukanen-Kilde, MD Former Chief Medical Officer of Finland December 6, 2000

It is technically possible for every newborn to be injected with a microchip, which could then function to identify the person for the rest of his or her life. Such plans are secretly being discussed in the U.S. without any public airing of the privacy issues involved.

When a 5-micromillimeter microchip (the diameter of a strand of hair is 50 micromillimeters) is placed into optical nerve of the eye, it draws neuroimpulses from the brain that embody the experiences, smells, sights, and voice of the implanted person. Once transferred and stored in a computer, these neuroimpulses can be projected back to the person's brain via the microchip to be reexperienced. Using a RMS, a land-based computer operator can send electromagnetic messages (encoded as signals) to the nervous system, affecting the target's performance. With RMS, healthy persons can be induced to see hallucinations and to hear voices in their heads.

The mass media has not reported that an implanted person's privacy vanishes for the rest of his or her life.

Thought signals and subconscious thinking can be read, dreams affected and even induced, all without the knowledge or consent of the implanted person.

This "silent war" is being conducted against unknowing civilians and soldiers by military and intelligence agencies. Since 1980, electronic stimulation of the brain (ESB) has been secretly used to control people targeted without their knowledge or consent. All international human rights agreements forbid nonconsensual manipulation of human beings — even in prisons, not to speak of civilian populations.

Are we ready for the robotization of mankind and the total elimination of privacy, including freedom of thought? How many of us would want to cede our entire life, including our most secret thoughts, to Big Brother? Yet the technology exists to create a totalitarian New World Order. Covert neurological communication systems are in place to counteract independent thinking and to control social and political activity on behalf of self-serving private and military interests.

One reason this technology has remained a state secret is the widespread prestige of the psychiatric Diagnostic Statistical Manual IV produced by the U.S. American Psychiatric Association (APA) and printed in 18 languages. Psychiatrists working for U.S. intelligence agencies no doubt participated in writing and revising this manual. This psychiatric "bible" covers up the secret development of MC technologies by labeling some of their effects as symptoms of paranoid schizophrenia.

**Centre for Conflict Resolution - Department of Peace Studies
Bradford Non-Lethal Weapons Research Project (BNLWRP)
Research Report No. 8
By Neil Davison and Nick Lewer
March 2006**

For police and security sector services this ethical and social problem is not going to go away. It will, in essence, become a bigger issue, as the new technologies start to mature, and offer a wider range of technological opportunities (with associated socio-political implications) to those responsible for law and order. It will test potential linkages between the temptation of using such technologies for the 'political control' of populations, and the police-state relationship.

Neuroscience and the military

In early 2006 the think tank Demos and the Wellcome Trust published a collection of essays entitled *Better Humans? The Politics of Human Enhancement and Life Extension*. In his contribution, Professor Steven Rose, a leading neuroscientist based at the Open University, warns of increasing military interest in emerging technologies that may enable the manipulation of the brain:

...in the panicky environment of the so-called 'war on terror' there is increasing military interest in the development of techniques that can survey and possibly control and manipulate the mental processes of potential enemies.

He points to the use of electromagnetic energy to manipulate the brain:

...there is a long history of attempts by DARPA [US Defense Advanced Research Projects Agency] to develop techniques for focusing microwave beams to disorient or confuse opponents. Whether microwave technology is capable of achieving this goal is uncertain. More promising, however, is a much newer technique – transcranial magnetic stimulation (TMS). This focuses an intense magnetic field on specific brain regions, and has been shown specifically to affect thoughts, perceptions and behaviours that are dependent on those regions. Currently usable only when a subject's head is placed inside the relevant machine [actually, a means of surveilling and controlling the process of thought at a distance already exists and has for some decades], TMS at a distance is now under active investigation. So is chip technology, which might provide implanted prostheses to overcome sensory deficits or control behaviour.

Ostensibly DARPA's interest in TMS is in enhancing the performance of US soldiers, as described on the web site of its Defense Sciences Office:

The goal of the Preventing Sleep Deprivation Program is to define and implement approaches to prevent the harmful effects of sleep deprivation, and to provide methods for recovery of function with particular emphasis on cognitive and psychomotor impairments. Among the approaches currently under investigation include novel

Exhibit J – Supporting Documentation

pharmaceuticals that enhance neural transmission, nutraceuticals that promote neurogenesis, cognitive training, and devices such as transcranial magnetic stimulation.

However, given the current interest in directed energy and suppressive/incapacitating weaponry, it is hard to imagine that this technique is not under consideration for use as a weapon. Other means of manipulating the nervous system using electromagnetic beams certainly are. In the ‘Directed Energy’ section of this report we describe research sponsored by the US Air Force that seeks to use electromagnetic energy to manipulate the nervous system by altering neurotransmitter release.

Russia is also conducting research into the use of electromagnetic radiation to manipulate the nervous system.

Bioelectromagnetic weapons

A final report on a three-year US Air Force funded project to study the effects of radiofrequency (RF) energy on nervous system function gives some insight into an area of weapons development where there has been much speculation but little available information over many years. Two researchers at the University of Nevada, Reno, Dr. Gale Graviso, an Associate Professor of Pharmacology in the School of Medicine, and Dr. Indira Chatterjee, a Professor in the Department of Electrical Engineering, have been investigating the use of RF energy to manipulate the release of neurotransmitters in the nervous system with a view to developing an incapacitating weapon. The research project, entitled Sensitivity to Neurotransmitter Release to Radiofrequency Fields, ran from 1 June 2002 until 31 May 2005 under contract number F49620-02-1-0306 with the Air Force Office of Scientific Research (AFOSR) for \$357,652. The abstract of the final report¹³⁶ is very clear about the purpose of the research undertaken:

Exploring the interactions between radiofrequency (RF) radiation and biological systems is essential for developing RF-based non-lethal stunning/immobilizing weaponry. To this end a research effort was initiated to identify RF parameters potentially capable of selectively altering exocytosis, the process underlying neurotransmitter release and hence nervous system function.

Experiments were conducted on nerve cells from the adrenal medulla section of the adrenal gland. The adrenal medulla controls release of the catecholamine neurotransmitters adrenaline and noradrenaline into the bloodstream. The main observation given in the final report on the research is that they found an increase in release of catecholamines from these cells as a result of exposure to certain frequencies of RF energy.

A second concurrent three-year research effort (‘Project 2’) being conducted by the same researchers, which began on 1 June 2003, has been funded by the ‘Department of Defense Experimental Program to Stimulate Competitive Research (DEPSCoR)’ and the University of Nevada, Reno with a total of \$750,000. This project is not only looking at influencing the nervous system with RF radiation but also affecting muscle contraction:

Exhibit J – Supporting Documentation

The project addresses the long-term goals set in Project 1 funded by the AFOSR, i.e. investigating the feasibility of designing novel non-lethal stunning/immobilizing weapons based on non-thermal effects of RF/microwave radiation on neurotransmitter release from chromaffin cells. It extends the scope of Project 1 by proposing to conduct exposures at low levels of microwave radiation, as well as by using another type of excitable cell i.e. skeletal muscle cells, to investigate whether RF/microwave radiation will produce non-thermal effects on muscle contraction, thereby providing another strategy to design novel immobilizing weaponry.

Having learnt about these projects we looked for any announcements about the research at the time of the initial funding award in 2003, and we found a University of Nevada press release from March 2003 that is deeply deceptive. Not only does it omit any reference to the sole purpose of the research, i.e. development of “novel immobilizing weaponry”, but it also claims that the research is for beneficial therapeutic purposes:

As regards the broader issue of whether it is in any way acceptable to develop bioelectromagnetic weapons that could have an incapacitating and suppressing effect on people by manipulating their nervous system or their muscles, the University of Nevada’s 2003 press release and its evident omission answers this question for us.

FUTURE SUB-LETHAL, INCAPACITATING & PARALYSING TECHNOLOGIES - THEIR COMING ROLE IN THE MASS PRODUCTION OF TORTURE, CRUEL, INHUMANE & DEGRADING TREATMENT

**Dr Steve Wright - Director of the Omega Foundation
A Draft Paper Presented To The Expert Seminar On Security
Equipment & The Prevention Of Torture
25-26 October 2002. London, UK**

This paper covers the emergence of new sub-lethal, incapacitating and paralyzing technologies and their coming role in the mass production of torture, cruel, inhumane and degrading treatment. It grew out of the work the Omega Foundation has undertaken for Amnesty International (on electroshock, restraining and torture technologies), the European Commission, the European Parliament and Landmine Action. Throughout its existence, Omega has tracked technologies, particularly less lethal weapons) deployed by the police, military and security services to create human rights violations, including weapons used in torture. However, such technologies have always been seen by us as multi-functional, weapons of flexible response rather than specifically designed just for a role in torture.

For many years the US used so called non-lethal weapons in its prisons, for crowd control and often in conjunction with lethal force during war such as the massive use of CS in Vietnam against combatants and non-combatants alike. A key strand of such work involved the creation of non-lethal weapons for interrogation or as Peter Watson has put it, war on the mind. After World War II, many countries examined the use of chemicals for the manipulation of human behaviour and a rich seam of pharmacological work opened up to facilitate these needs and the creation of mechanisms to induce, debilitation, dependence and dread.

Directed Energy or Radio frequency Weapons using the microwave part of the electromagnetic spectrum are probably the most controversial area of development. They are discussed in Non-Lethal Weapon circles but little in the way of hard data is provided given their sensitivity. They are seen as offering a potential rheostatic or tunable response from less-lethal; to lethal. Already demonstrated is the ability to induce a heating effect up to 107 degrees F to induce an artificial fever. There has been much speculation but a dearth of hard data about such psychotronic weapons which are already worrying those concerned about bioethics. Such electronic neuro-influence weapons would be in breach of the recent EU resolution regarding technologies which interact directly with the human nervous system. Voice to skull technology has already been discussed in the literature.

We are supposed to believe that the major role of these disabling and incapacitating technologies is in creating harmless warfare. Work by the Omega Foundation in the past for the European Parliament reveals a pattern of such less lethal weapons being used both for punishment and for softening up dissenters before deploying lethal force. There is

Exhibit J – Supporting Documentation

every expectation that the second generation of these technologies will find similar roles, especially if the companies making such weapons seek wider markets.

Without adequate international controls, we may end up with weapons of mass punishment, and gross human rights violation - taking torture out of the present tradition of 1 (or more) to 1; to a capacity where one person or group can torture or deliberately debilitate and punish 1-to many.

The debate on International Law and Non-Lethal Weapons is vitally important, if we are to establish the continuance of basic principles of what is and what is not beyond the limits of permissibility in the face of US attempts to define these weapons as lying outside such restrictions. They are not.

Some of the devices discussed above will find a future role in mass producing torture, cruel, inhumane and degrading treatment. Other technologies will follow as governments find ever new mechanisms to quell dissenters, punish civilians who would migrate into their territory, as well force multiplying tools or as surprise devices to immobilise combatants. At both the UN and the EU levels, we should attempt to enhance controls on such technologies which are anticipatory in that they can be applied to new devices and inventions on the horizon rather than just the single function torture weapons of old.

Alas, good laws, export controls and regulations do not guarantee good practice. Whatever controls are eventually agreed, it is sensible to assume that loopholes will be found accompanied by traditional denials of government and corporate collusion. Taking this as a starting point, it would be prudent for the responsible authorities to re-examine the resources needed both by customs and intelligence agencies to adequately prioritize tracking of malfactors in the future. It would also seem prudent to put in place further field research and audit procedures to ensure that the information required to monitor the torture trail enables a more prophylactic approach.

New CIA director Hayden plans massive expansion of spying on Americans

By DOUG THOMPSON

May 31, 2006, 08:19

© Copyright 2006 by Capitol Hill Blue

Now that he is officially sworn in as the new head of the Central Intelligence Agency, Gen. Michael Hayden plans to build a vast domestic spying network that will pry into the lives of most Americans around the clock.

President George W. Bush told Hayden to "take whatever steps necessary" to monitor Americans 24/7 by listening in on their phone calls, bugging their homes and offices, probing their private lives, snooping into their financial records and watching their travel habits.

Can I prove this in a court of law? No. Do I know it is happening? Yes, without a doubt. Enough sources within the CIA, FBI, NSA and Pentagon have come forward in recent days to warn about Hayden's plans for an expanded, consolidated spy network aimed at Americans, not terrorists, and violating numerous laws that prohibit such activities against citizens of this country.

"What Hayden plans to do is not only illegal, it is immoral," says a longtime CIA operative who may retire early rather than participate in what he sees as an illegal extension of the spy agency's activities.

Hayden, who oversaw the National Security Agency's questionable monitoring of phone calls and emails of Americans, plans to consolidate much of the country's domestic spying into a new desk at the CIA, calling it a "domestic terrorism prevention" operation.

The desk will oversee not only NSA's increased monitoring of electronic communications by Americans but also the Defense Advanced Research Projects Agency's "terrorist information awareness" program that monitors travel and financial activities by Americans by gathering real-time data from banks, airlines, travel agencies and credit card companies.

The CIA operation will also coordinate with the Pentagon's domestic spying program that monitors activities of anti-war groups, organizations critical of the Bush administrations and others tagged as enemies of the state.

FBI agents will step up monitoring of journalists to identify leaks of stories embarrassing to the government. The bureau is already monitoring phone calls and emails by reporters on a routine basis and has increased surveillance of writers for major news organizations and monitoring of travel and financial records using the DARPA computers.

"This is not 'total information awareness' but 'total information control' aimed at watching Americans fulltime and ignoring the protections that are supposed to be guaranteed by

Exhibit J – Supporting Documentation

the Constitution," says an FBI agent familiar with the programs. "I didn't sign on for this and I'm getting the hell out."

In fact, resignations at major U.S. spy agencies are at an all-time high. Exact numbers are classified but sources say field agents, data analysts and others are leaving in droves rather than join the frenzy to spy on Americans.

Hayden sailed through the Senate confirmation process defending his domestic spying program at NSA, claiming it was legal. Privacy experts and Constitutional law professors say otherwise but the Senate rubber-stamped Bush's choice anyway, choosing to ignore the threats to freedom.

Hayden will have little problem concealing the operation from the public and Congress. Many of the CIA's programs are classified and the agency has, in the past, concealed programs even from the intelligence committees in both the House and Senate. The DARPA project and the Pentagon domestic spying programs are "black bag" operations that do not require Congressional approval or oversight.

Likewise, many of the details of the NSA domestic spying program were withheld from Congress and escaped public notice until media reports unearthed them and the Bush administration now threatens to jail the reporters who broke the story. I wish I could prove this. I wish one, just one, source on the inside was willing to come forward and allow his or her name to be used but those who might be tempted see what happened to Mary McCarthy, the CIA employee fired and under threat of prosecution for leaking information about CIA torture camps in Europe.

But I know it is happening. People I've known for years and trust tell me it is happening and the past record of spying, lies and deceit by the Bush administration point to just such an operation.

This nation is under attack. We, the people, are under attack. And the enemy in this case is not an Islamic radical hiding in a cave in Afghanistan but a cabal of truly evil men and women at 1600 Pennsylvania Avenue and on Capitol Hill aided by carefully-picked, law-ignoring appointees at the Hoover Building on Pennsylvania Avenue, a black glass-walled building at Fort Meade, MD, and a complex in Langley, Virginia.

PSI TECH Mission Statement

A message from Jonina Dourif, President and Dane Spotts, CEO

PSI TECH's mission is to evolve human consciousness through the development and training of mind technologies. We assert that all people are born with natural psychic or sixth sense abilities, however, in most, it lies dormant. By training our cutting edge Technical Remote Viewing® skills, this innate PSI ability or "PSI muscle" as we like to call it, becomes activated. Awakening this dormant capability in the human race is PSI TECH's goal. Once human beings have installed this learned skill, not only will it expand an individual's potential but when enough people become activated, it will shift consciousness on a global scale.

PSI TECH had its beginnings in the covert world of military intelligence. The company was created in 1989 by a few renegade officers in a top secret military intelligence unit who risked their careers to transfer this classified technology into the private sector. Those individuals knew that when the Defense Intelligence Agency's Remote Viewing Operational Unit lost its funding that this ground breaking technology would be lost forever. PSI TECH was formed to prevent the loss and to secure its subsistence. Several highly placed government individuals chose to look the other way, thus, helping to usher Remote Viewing and PSI TECH into the private sector.

...

Imagine a world with no secrets. A future where human beings have developed their innate sixth sense and have integrated these abilities into their everyday life. When enough people on Planet Earth have installed this skill, it will change the face of consciousness. The world will be a very different place. You play an important role in that future. A player in the biggest and most important **game** in the universe. All of us at PSI TECH invite you to join us. We look forward to assisting you in developing your potential while you assist us in reaching our goal. This is just the beginning.

*[No secrets for others and complete secrecy for themselves with disinformation like that in abundance. What a mass of dangerous lies and half truths by an intelligence community that specializes in those. This, believe it or not, is part of the way that the intelligence community (Nope, no 'renegade' offshoot. The CIA does not **allow** renegade offshoots. It **plants** them.) is seeking to build a future where some have all the information (and hence power) and others have very little – can literally sneak into your home and even your mind. There is no physical mechanism for natural psychic abilities. That part is sheer lie. There IS hard evidence (the little that has not been destroyed or classified) that the intelligence community has funded and developed surreptitious technologies of extraordinary surveillance and has been applying them for decades in cruel and esoteric ways that leapfrog all Constitutional protections of citizens and that protect themselves in sheer lack of proof and that they ARE drawing in a big part of the conservative community to leverage those technologies, perhaps without many of those persons even knowing that the 'abilities' are based on surreptitious technologies at all (or that they themselves can also fall prey to them).]*

Dr. James Randall Noblitt
Clinical Psychologist

Dallas, Texas

Tuesday, July 22, 2008, 5:49 PM

I am James Randy Noblitt and I have a Ph.D. in Clinical Psychology. I am a practicing and licensed Clinical Psychologist. I have written a book which includes the subject of mind control, and also I have seen many patients reporting that they were abused in mind control experiments. Some of these allegations are that mind control experiments have been done either within certain agencies of the United States government, or within the auspices of these agencies. I feel it's very, very important that these allegations be investigated thoroughly. We already know that the United States government has been occasionally involved in other kinds of unfortunate activities such as studies involving syphilis with black people and other such similar situations. This is something that needs serious scientific and congressional investigation.
