

Exhibit Q – Timeline

An MKULTRA Timeline Subset

* ‘Doctor Strangelove’ debuts

* ‘2001: A Space Odyssey’ debuts

(1969) Mr. Robert MacMahan of the Department of Defense requests from congress \$10 million to develop, within 5 to 10 years, a synthetic biological agent to which no natural immunity exists.

(1970) Funding for the synthetic biological agent is obtained under H.R. 15090. The project, under the supervision of the CIA, is carried out by the Special Operations Division at Fort Detrick, the army's top secret biological weapons facility. Speculation is raised that molecular biology techniques are used to produce AIDS-like retroviruses.

(1970) United States intensifies its development of ethnic weapons (Military Review, Nov., 1970), designed to selectively target and eliminate specific ethnic groups who are susceptible due to genetic differences and variations in DNA.

(1975) The virus section of Fort Detrick's Center for Biological Warfare Research is renamed the Fredrick Cancer Research Facilities and placed under the supervision of the National Cancer Institute (NCI) . It is here that a special virus cancer program is initiated by the U.S. Navy, purportedly to develop cancer-causing viruses. It is also here that retro virologists isolate a virus to which no immunity exists. It is later named HTLV (Human T-cell Leukemia Virus).

(1977) Senate hearings on Health and Scientific Research confirm that 239 populated areas had been contaminated with biological agents between 1949 and 1969. Some of the areas included San Francisco, Washington, D.C., Key West, Panama City, Minneapolis, and St. Louis.

* ‘Close Encounters’ debuts

(1978) Experimental Hepatitis B vaccine trials, conducted by the CDC, begin in New York, Los Angeles and San Francisco. Ads for research subjects specifically ask for promiscuous homosexual men.

* ‘The Stand’ published

* ‘Airplane’ debuts

* ‘Heavy Metal’ debuts

(1981) First cases of AIDS are confirmed in homosexual men in New York, Los Angeles and

Exhibit Q – Timeline

San Francisco, triggering speculation that AIDS may have been introduced via the Hepatitis B vaccine.

(1985) According to the journal Science (227:173-177), HTLV and VISNA, a fatal sheep virus, are very similar, indicating a close taxonomic and evolutionary relationship.

(1986) According to the Proceedings of the National Academy of Sciences (83:4007-4011), HIV and VISNA are highly similar and share all structural elements, except for a small segment which is nearly identical to HTLV. This leads to speculation that HTLV and VISNA may have been linked to produce a new retrovirus to which no natural immunity exists.

(1986) A report to Congress reveals that the U.S. Government's current generation of biological agents includes: modified viruses, naturally occurring toxins, and agents that are altered through genetic engineering to change immunological character and prevent treatment by all existing vaccines.

(1987) Department of Defense admits that, despite a treaty banning research and development of biological agents, it continues to operate research facilities at 127 facilities and universities around the nation.

(1990) More than 1500 six-month old black and Hispanic babies in Los Angeles are given an "experimental" measles vaccine that had never been licensed for use in the United States. CDC later admits that parents were never informed that the vaccine being injected to their children was experimental.

(1994) With a technique called "gene tracking," Dr. Garth Nicolson at the MD. Anderson Cancer Center in Houston, TX discovers that many returning Desert Storm veterans are infected with an altered strain of Mycoplasma incognitus, a microbe commonly used in the production of biological weapons. Incorporated into its molecular structure is 40 percent of the HIV protein coat, indicating that it had been man-made.
